Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām" (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

By Ḥlš son of šhr son of (bd) son of ‘dim son of Msšk son of Ġlm(t) son of ṭš and he camped here and then he drove the male camels in this valley while pasturing and he was guarding the camels and so 0 Lt and Gdweed [grant] security

Apparatus Criticus:
C. wsṣq “he was plundered” for “he drove”; b’d “they withdrew” for ṭy “pastured”; w ḥṣ ‘bnl” and he waited with ‘bnl for w ḥṣ ‘b(ḥl) “and he was guarding the camels”.

---
Zalaf (l) "In the neighbourhood of Zalaf, near Wâdî al-Shâm " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

MST p. 8 & n. 42: w yr mbr dṭ' - possibly " and he returned to the watering place from the inner desert in the season of the later rains " although lack of the preposition m leaves the trans. ambiguous.

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa'qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

l hy bn ṭḥ bn ḫyʾr bn ʾbd bn ʾsʾd w ṭgm 'l-ʾ){šʾ)yʾ{h[t]}{m} f h lt sš{m} t-ʾd sš{r} w {t}w{r} ṭ{y}w{r} h-ʾ{ š²r

By Ḥy son of ṭḥ son of ḫyʾr son of ʾbd son of ʾsʾd and he grieved for (his) (companions) (who were lost) and so O Lt [grant] [security] to whoever leaves [the inscription] intact and (blind) whoever scrubs out the inscription

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām * (C p. 304), Rīf Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīgān Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2649 (Dunand 192 b)

I mlk bn tm bn hrs²n bn qhs² w syr mn- tny f ( ) b’y ḥq ( )l- my[h]l

By Mlk son of Tm son of Ḥrs²n son of Qhs² and he returned to water from tny f ( ) b’y ḥq ( )l- my[h]l

Apparatus Criticus:
C: mnnty [h]b’y ḥqwny[f]

Provenance:
Zalaf (a) “In the neighbourhood of Zalaf, near Wādī al-Shām” (C p. 304), Ḍf Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa‘qûl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

By [Nhr] son of Kṯrt son of (Ḥmyn) son of (Fqlt) son of Zkr

Apparatus Criticus:
C: l nh(r) bn kṯrt bn ḥm(y)n bn rqlt( ) bn zkr

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

By Ṣnt son of Bnsrh

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riḡm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). *C* (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in *C* of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (i) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria (Latitute/Longitude: 32.9269 / 37.3296)
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām" (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa'qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

C 2844 (Dunand 295 a)

I s¹wd bn ’r’ bn bs² b[n] gml h- d(r)

By Qḥs² son of Y’s’lm son of Mlk and he found the traces of the ’l Kn and (grieved in pain) greatly {for} the ’l Df and so O Lt make secure the people of the ’l Df

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqul, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the
descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C.p. 381), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīgm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

\[l \text{t}^\text{n} \text{bn } q\{j\}^\text{sn} \text{bn } \text{bd} \text{ bn } \text{ḥddn} \text{ bn } ml\{k\} \text{ bn } \text{bd} \text{ bn } mlk \text{ bn } ^d\text{ d} \text{f } \text{w} \text{ r}^\text{y} \text{ h} \text{. } ^{\text{bl} } \text{w } \{d\}---- \text{ w} \text{nq}^\text{t} \text{b- } \text{wdd } \{l\} \text{ } \text{d} \text{ y}^\text{3}/\text{w} \text{r} \text{ h- } \text{ḥtt}

By "tn son of \{Q\}'sn of \{bd\} son of Ḥddn son of \{ml\} son of \{bd\} son of \{mlk\} son of \{d\} of the lineage of \{D\}'f and he pastured the camels and ---- and ejection from tomb by a loved one on whoever \{scratches out\} the carving

Apparatus Criticus:
C: "tn for "tl"; w d--- \{m\} s\{n\} f h \{l\} f \{f\} \{w\}r \{w\} \{rg for w \{d\}----; nq\}'t b- wdd "ejection from the grave by a loved one";
Jamme 1970: 80: wdd;
MISS p. 447 n. 26: "tl"

Provenance:
Zalaf (k) "On the left bank of Wādī al-Šām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qā'ūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m) (C. p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa‘qul, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria

[Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C's description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

By [Wld] son of ('n)m son of Ghr and (he found) the inscription of 'wm and so ( he grieved in pain and O (Rdy) blind whoever

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

By Mft son of †s¹ {son of} †zzt son of {Hggt}

Apparatus Criticus:
C: l mft bn †s¹ bn †zzt bn (s¹)ggt

Provenance:
Zalaf (k) "On the left bank of Wādī al-Shām, about 3 km upstream towards Zalaf" (C p. 381), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa'qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. C’s description of the location the present inscription is useless since it does not give the starting point from which the site is "3 km upstream towards Zalaf”.

C: s³lw "help" for "he left"

Provenance:
Zalaf (l) "On the left bank of Wādí al-Shām, in the area of Zalaf, downstream" (C p. 405), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C’s description is so vague as to be useless.

C 3146 (Dunand 828 b)

\[\text{fr}^2 \text{bn fd}^1 \text{bn (b)hm}\]

By Fr’ son of Fd’l son of Bhm

Apparatus Criticus:

C: fr’ bn fd’l bn bhm

Provenance:
Zalaf (l) “On the left bank of Wādī al-Shām, in the area of Zalaf, downstream” (C p. 405), Rif Dimashq, Syria

Latitude/Longitude: 32.9269 / 37.3296

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, C’s description is so vague as to be useless.

Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C’s description means.

By ʾšḥmn son of Ẓlm son of Mṣʾk son of ʾby

Apparatus Criticus:
C: l ʾšḥmn bn ẓlm bn msʾk bn ʾr[y]

Provenance:
Zalaf (m) "On the left bank of Wādī al-Shām, not far from Zalaf from the south to the west" (C p. 410)., Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rijm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C's description means.

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. It is not clear what C’s description means.

By Bhl son of Qns¹

Provenance:
Ishbikkat al-Namārah, Rif Dimashq, Syria

[Latitude/Longitude: 32.89645 / 37.31101]

C's location of this inscription as "on the track from al-ʿUdaysiyah to al-Namārah, not far from al-Namārah" (C p. 420), is less precise than Dussaud & Macler's: "at the beginning of Ishbikkat [al-Namārah]" (1901: 88).
This is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on “islands” within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbildah on the Ġabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

By ‘nm son of ’s’wd

Provenance:
Al’Isāwī, Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Al’Isāwī is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-Namārah dam to the Ruḥbah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions.

Provenance:
Al-ʿĪsāwī, Rif Dimashq, Syria
[Latitude/Longitude: 32.89645 / 37.31101]
Al-ʿĪsāwī is the name of a probably ancient well between two headlands on the eastern side of the Wādī Shām as it runs northwards from the modern Al-Namārah dam to the Rubbah. The well is large, stone lined and with stone water-channels running from it. The main concentration of published inscriptions is on the top of the northern headland, but there also many inscriptions on its south-west slopes, coming down to the well and on the southern headland, on the crest of which is a stone tower. Littmann visited the site twice when he and other members of the expeditions copied some 450 inscriptions. Between 1996 and 2003, the Safaitic Epigraphic Survey Programme [SESP] made a comprehensive survey of the site recording over 3500 inscriptions.

C 3264 (LSI 126; LP 346; Is.Mu 96)

*l wrd bn tm bn <<<bṭ<<<*

By Wrdr son of Tm son of *bṭ*

**Apparatus Criticus:**

LP and C: *bṭ* for *ṣṭ* *bṭ*.

**Commentary:**

Note that in the arrangement in C, 3264 belongs in Articulus XXIII (al-ʿĪsāwī) rather than Articulus XXIV. A chiselled y between *bn* and *bṭ* and three other possible letters around the end of the text were read by Littmann as LP 347 (I ṣʿb). But their position on the stone and their distribution in and around C 3264 (= LP 346) make this improbable.

C 3265 (Dussaud V 206)

l mqt l bn btm[h]

By Mqtl son of Btmh

Provenance:

"Near the track leading from the mouth of Wādī al-Gharz to al-Namārah" (C p. 425), "on the right [= west] of the road" (Dussaud & Macler 1901: 86), Rif Dimashq, Syria

[Latitude/Longitude: 32.9035 / 37.2962]

The location of these texts is complicated by the fact that a small wadi debouches into the Ruhbah at a point some 1.2 km south-west of the mouth of Wādī al-Gharz, near the point at which the "Roman road" meets the Ruhbah. The douchment of this wadi seems sometimes to have been confused with that of the Wādī al-Gharz. If this was so in this case, Dussaud & Macler may have been following the "Roman road" from the point at which this unnamed wadi debouches into the Ruhbah southwards to al-Namārah, in which case these inscriptions would belong with C 2276–2319

Latitude: southern end of the "Roman road" approximately 32.9035, northern end approximately 32.9504

Longitude: southern end of the "Roman road" approximately 37.2962, northern end approximately 37.2951

By Wʾl son of Sʾḥyt son of Zʾn

Provenance:
"Near the track leading from the mouth of Wādī al-Gharz to al-Namārah" (C p. 425), "on the right [= west] of the road" (Dussaud & Macler 1901: 86), Rif Dimashq, Syria

[Latitude/Longitude: 32.9035 / 37.2962]

The location of these texts is complicated by the fact that a small wadi debouches into the Ruhbah at a point some 1.2 km south-west of the mouth of Wādī al-Gharz, near the point at which the "Roman road" meets the Ruhbah. The douchment of this wadi seems sometimes to have been confused with that of the Wādī al-Gharz. If this was so in this case, Dussaud & Macler may have been following the "Roman road" from the point at which this unnamed wadi debouches into the Ruhbah southwards to al-Namārah, in which case these inscriptions would belong with C 2276–2319

Latitude: southern end of the "Roman road" approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the "Roman road" approximately 37.2962, northern end approximately 37.2951

Provenance:
"Ishbilkat [al-Namārah]" (C p. 431), Rif Dimashq, Syria

[Latitude/Longitude: 32.89645 / 37.31101]

Ishbilkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wāḍī Ishbilkah on the Gabriel al-'Arab, mentioned in Dussaud & Macler 1903: 28.

Ishbikkat al-Namārah is the wide area, now covered by the basin of the modern dam north-west of al-Namārah, where water from the winter and spring floods collects and usually lasts well into the dry season. There are numerous inscriptions along its edges and on "islands" within the basin, see, for instance the HN and MN texts. It should be noted that this is not, of course, the same place as the Wādī Ishbikkah on the Gabal al-ʿArab, mentioned in Dussaud & Macler 1903: 28.

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort, the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namarā itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort, the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffitti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

By Ḥgl son of ṛhl

Provenance:
Al-Namarâ (C p. 44.3), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namarâ itself is an "island" in a basin at the confluence of the Wādī al-Sawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort, the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Ṣāmāʾ. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah itself is an “island” in a basin at the confluence of the Wādī al-Ṣawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort, the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Al-Namārah (C p. 443), Rif Dimashq, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Šawṭ and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On it's top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffiti on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

Provenance:
The environs of al-Namārah (C. p. 443), Rif Dimashq, Syria

[Latitude/Longitude: 32.88545 / 37.29163]

This is not one of the four texts which Graham said (1858: 714) came from "the neigbourhood of al-Namārah" (1858: 714). C probably placed it here because, in Graham 1860: pl. III, it is placed above the text (22 b) which C identifies with Graham 1858: no. 21, which is among those from "the neigbourhood of al-Namārah" (1858: 714). Al-Namārah itself is an "island" in a basin at the confluence of the Wādī al-Ṣawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. Provenance:
“Between al-Namārah and al-Hifnāh” (C p. 462), Rif Dimashq and or al-Suwaydah, Syria
[Latitude/Longitude: 32.88545 / 37.29163]
Al-Hifnāh is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hifnā runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu’azzin, Nehmé
1996, Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-'Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:

Al-Ḥifnah, Al-Suwaydah, Syria

Latitude/Longitude: 32.76784 / 37.00326

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs...
downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥavrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote “Al-Ḥifnah is a water-place in the Wāḍī al-Šām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

By Nṣr son of ‘s1 son of ‘s1

Provenance:
Al-Hifiḥnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Hifiḥnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hifīnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmē 1996. Littmann wrote “Al-Hifiṇah is a water-place in the Wāḍī al-Shām, between the Ḥawrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

Al-Hifnah is at a point at which Wāḍî al-Shām becomes a wide gorge, and the site of al-Hifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu‘azzin, Nehmé 1996. Littmann wrote “Al-Hifnah is a water-place in the Wāḍî al-Shām, between the Ḳawrān mountains [Gābal al-‘Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3729 (Dussaud M 259; LP 786)

I ʾs¹ḥ bn ʾts¹

By ʾs¹ḥ son of ʾts¹

Provenance:
Al-Ḥifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnā runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:

Al-Hīfnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Hīfnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hīfnah runs downstream from a series of wells in the wādi bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Hīfnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ṣabal al-Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Gabal al-ʿArab] and al-Nemrāh. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places; stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the rocks or behind them" (Littmann 1943: 1).

Al-Hîfnah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Hîfnah is at a point at which Wâdî al-Shâm becomes a wide gorge, and the site of al-Hîfna runs downstream from a series of wells in the wâdî bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmē 1996. Littmann wrote "Al-Hîfnah is a water-place in the Wâdî al-Shâm, between the Ḥawrân mountains (Gabal al-Arab) and al-Nemârah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Al-Ḥifnah is at a point at which Wādī al-Šām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʾazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Šām, between the Ḥawrān mountains [Ḡabal al-ʿArab] and al-Nemārāh. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Provenance:
Al-Hifnah, Al-Suwaydayh, Syria
[Latitude/Longitude: 32.76784 / 37.00326]

Al-Hifnah is at a point at which Wadi al-Shām becomes a wide gorge, and the site of al-Hifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This site is C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Hifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains (Ḡabal al-ʿArab) and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

C 3876 (Dussaud M 398; LSI 80)

I ṭd’ bn  Ṿghr

By ṭd’ son of Ṿghr

Provenance:
Al-Ḥifnāh, Al-Suwaydah, Syria
[Latitude/Longitude: 32.76784 / 37.00326]
Al-Ḥifnāh is at a point at which Wādī al-Šām becomes a wide gorge, and the site of al-Ḥifnāh runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote “Al-Ḥifnāh is a water-place in the Wādī al-Šām, between the Ḥawrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pastureage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifna runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Mu’azzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [ánír-(141,359),(644,395)]
[Gabal ‘Arab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them” (Littmann 1943: 1).

Al-Ḥifnah is at a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Ḥifnah runs downstream from a series of wells in the wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the wadi, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmé 1996. Littmann wrote "Al-Ḥifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ḡabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

[Latitude/Longitude: 32.76784 / 37.00326]

Al-Hifnah is a point at which Wādī al-Shām becomes a wide gorge, and the site of al-Hifnah runs downstream from a series of wells in the Wādī bed to a series of pools which were still full in mid-July 1995. Some of the wells are large and probably ancient, others are of the small bedouin type. In July 1995 three were blocked and one was operational. The main concentration of inscriptions is to be found on the escarpment of the left bank of the Wādī, north of the pool. This is site C in Macdonald, Al Muʿazzin, Nehmē 1996. Littmann wrote "Al-Hifnah is a water-place in the Wādī al-Shām, between the Ḥawrān mountains [Ǧabal al-ʿArab] and al-Nemārah. There are several pools in the wadi, some of which are said to contain water throughout the year. The bed of the wadi is wide enough to secure pasturage for the animals of the Bedawin during spring-time. The bank of the south [right] side is rather high and steep, and at a few places it is overhanging so that there is even shelter against the rain. In the bed of the wadi there are a great many camping-places: stone fences, more or less round, encircling places of different size that are cleaned of stones. There are also several tombs, one of which is surrounded by a small fence and seems to be a Bedawin sanctuary being covered with rags and locks of hair. The Safaitic inscriptions are mostly on the banks or behind them" (Littmann 1943: 1).

Corpus of Safaitic inscriptions

According to Dussaud & Macler (1903: 26 [428]) Ghadir Abū Za'rubur lies at the foot of Riğm Mushbik. They show a photograph of it full of water in March 1901 (Pl. IV), and say the area around it "abounds in Safaitic inscriptions."

"Kawm al-Wāsim" [C p. 500], Al-Suwaydah, Syria

[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Ḥabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabki) which is one of the numerous tributaries of the Wādī al-Shām. The word kawm means “a mound, or small hill” and Kawm al-Wāsim is just such a mound, about 1.8 km north-east of the village, on the right bank of the Wādī Ishbikkī. It is surmounted by a large circular structure (approx. 15 m in diameter) built of rough, apparently Cyclopaean, masonry. The Safaitic inscriptions are carved on the blocks in situ — suggesting that they postdate the abandonment of the building — and on the rocks of a natural platform overlooking the wadi.

The spring at al-Wāsim [Dussaud & Macler 1903: 28 {430}], Al-Suwaydah, Syria
[Latitude/Longitude: 32.7333 / 36.8833]
The village of al-Wāsim is on the lower, eastern slopes of Gabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikkī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a “step” in the bed creating a “waterfall” about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

At a point where the wadi narrows, there is a “step” in the bed creating a “waterfall” about 20 m from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

[Latitude/Longitude: 32.7333 / 36.8833]

The village of al-Wāsim is on the lower, eastern slopes of Ġabal al-ʿArab, in the Wādī Ishbiikkī (Al-Shibkī) which is one of the numerous tributaries of the Wādī al-Shām. The spring is in the Wādī Ishbikī about 15 minutes by foot from the large cairn which is now called Qalʿat al-Wāsim. At a point where the wadi narrows, there is a "step" in the bed creating a "waterfall" about 20 m. from which are the remains of a rectangular building, probably modern, which encloses what were perhaps the ancient structures associated with the well or spring. The inscriptions are on the rocks overlooking the left bank of the wadi and are scattered over a number of rocks, but particularly on the vertical surfaces. They are not in the immediate vicinity of the wadi bed but slightly higher.

By Ṣʾḥl son of ʾl son of Ṣʾḥl son of ṭm of the lineage of Kn

Apparatus Criticus:
C: ʾḥy for ʾḥy; ṣʾḥl Ṣʾḥl for Ṣʾḥl ʾl kn.

Provenance:
Qalʿat al-Wāsim (Dussaud & Macler 1903: 28 [430]), Al-Suwaydah, Syria
The village of al-Wāsim is on the lower, eastern slopes of ġabal al-ʿArab, in the Wādī Ishbikkī (Al-Shabkī) which is one of the numerous tributaries of the Wādī al-Šām. Qalʿat al-Wāsim is a large cairn between Kawm al-Wāsim and the spring in the Wādī Ishbikkī (see the notes under C 4024). Dussaud & Macler describe it as a “watch-tower”. Note that they distinguish between Kawm al-Wāsim (which is surmounted by a large circular structure which they describe as “some ruins”) and Qalʿat al-Wāsim.

(1) rmʾl bn grʾlʾ l bn ḫṯ(n) dmy

By (Grʾlʾ) son of (Grʾlʾ) son of Bḥṯn he drew

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria [Latitude/Longitude: 32.7161 / 36.9315]

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

**Provenance:**
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria

[Latitude/Longitude: 32.7161 / 36.9315]

According to G. Ryckmans [1939: 507], the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wādī Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

Apparatus Criticus:
Jamme 1971: 29: lhʾ for lh(g); bn nʾm for bn ‘mr

Provenance:
In the Wādī Rushaydah, near a watering place about 10 km downstream from the village of al-Rushaydah, Al-Suwaydah, Syria
According to G. Ryckmans (1939: 507), the inscriptions were discovered while French troops were creating the track (later converted to a tarmac road) which led from al-Suwaydah to Zalaf. From the village of Rushaydah eastwards this road runs along the right bank of Wâdi Rushaydah. We have therefore taken the 10 km mentioned by Ryckmans as being along the course of the road, rather than in the wadi bed, or as the crow flies, but this may not be correct. Ryckmans says that many of the inscriptions [C 4196–4218] "were carved on the blocks of basalt which form the cliffs which tower over the north [= left] bank of the wadi", though "others were scattered at the junction of a gully with the wadi, near the watering place [C 4219–4249]."

C 4267 (Vogüé 326 a)

l ʾgrwn bn drs¹

By ʾGrwn son of Drs¹

Provenance:
On a series of nameless cairns or small groups of inscriptions in al-Kraa (al-Qara’ah), Al-Suwaydah, Syria. De Vogüé says that C 4259–4283 were found on isolated stones or in small groups* (1868–1877: 147), during his and Waddington’s journey from al-Namârah to the village of Shaqqâ on Ġabal al-ʿArab. This took them through the area known as al-Kraa (al-Qara’ah) which is bounded by the Dīrat al-Tulûl and the Šafâ in the north and Wâdí al-Gharz on the south and east. During the journey they passed near al-ʿIllîmmah (Latitude: approximately 32.8427; Longitude: approximately 37.1935) and south of al-Kusayrah (Latitude 32.9361; Longitude 37.15861 from Geonames). Apart from this we have no indication of their route, beyond the dotted line on de Vogüé’s map (1865).

By 'wdl son of Qfft son of Mrwn and he was lying in wait for enemies

Provenance:
On a cairn in al-Kraa (al-Qara’ah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria

De Vogüé and Waddington's journey from al-Namârah to the village of Shaqqâ on Ġabal al-ʿArab took them through the area known as al-Kraa (al-Qara’ah) which is bounded by the Dīrât al-Tūlûl and the Șâfâ to the north and Wâdl al-Gharz on the south and east. De Vogüé's map (1865) on which this cairn is marked "R" (for ruğm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harrah given by Wetzstein (1860: map) which is the same as that given by Butler, viz. "an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going..." (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

On a cairn in al-Kraa (al-Qara’ah) some two hours ride west of al-Kusayrah, Al-Suwaydah, Syria
[Latitude/Longitude: 32.93561 / 37.15839]
De Vogüé and Waddington’s journey from al-Namārah to the village of Shaqqā on Ǧabal al-ʿArab took them through the area known as al-Kraa (al-Qara’ah) which is bounded by theDIRat al-Tulūl and the Šafā to the north and Wādī al-Gharz on the south and east. De Vogüé’s map (1865) on which this cairn is marked “R” (for ruǧm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harrah given by Wetzstein (1860: map) which is the same as that given by Butler, viz “an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going...” (Butler, Norris & Stoever 1930: viii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

De Vogüé and Waddington’s journey from al-Namârah to the village of Shaqqâ on Ghabal al-‘Arab took them through the area known as al-Kraa (al-Qara’ah) which is bounded by the Dīrat al-Tulûl and the Şāfâ to the north and Wâdí al-Gharz on the south and east. De Vogüé’s map (1865) on which this cairn is marked “R” (for ruṯm) shows it to be west-south-west of al-Kusayrah. According to the measure of distance and time for travel on horseback in the harraḥ given by Wetzstein (1860: map) which is the same as that given by Butler, viz “an average of two and three-quarter miles [= 4.4 km] per hour for ordinary going...” (Butler, Norris & Stoever 1930: vii), a two hour journey on horseback would have taken de Vogüé and Waddington approximately 8.8 km west of al-Kusayrah, but of course we do not know whether they were going due west or north- or south-west.

Apparatus Criticus:
Cṣ(l)jt bn b(h)s² for ḥtt bn zf

Commentary:
The reading here is based on the LP 925 copy which, though a mirror-image of Dussaud M 471, clearly represents the same inscription.

Provenance:
Al-Namārah area, Al-Suwaydah, Syria
[Latitude/Longitude: 32.88545 / 37.29163]

According to Dussaud & Macler (1903: 151), this inscription was found between al-Namārah and Ghadir al-Darb, but according to Littmann (1943: 220) it comes from Al-Namārah. Al-Namārah itself is an “island” in a basin at the confluence of the Wādī al-Sawt and the Wādī al-Shām. The island rises to a considerable height above the wadi bed. On its top are the ruins of a Roman fort the outlines of which, and the square north-east and south-west towers, can still be made out. However, much of the masonry has been reused to build a mediaeval mausoleum, including a lintel with an unfinished Greek inscription mentioning Marcus Aurelius (Waddington 1870: no. 2264) and stone doors. There are many Safaitic, Greek and two Latin graffit on the slopes of the island and the banks of the wadi. In antiquity, there were small dams, cisterns, wells and diversion channels to trap the water and to lead it to nearby fields, see Macdonald 2009.

C 4361 (Dussaud M 472; LP 924)

$l'$t)m bn zʾkt bn $ʾlm

By Lʾtm son of Zʾkt son of ᵃʾlm

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria

[Latitude/Longitude: 32.844275 / 37.19575]

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30-80 cm deep and 4-10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

References:
As this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Princeton (1904: 156) gives this vague provenance were also copied but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Gharz (1903: 27 [4]) and Ghadīr Gharz, followed by C, give the provenance of this inscription simply as “between al Namārah” and Ghadir al-Darb (1903: 151 [553]) and describe Ghadir al-Darb as “a muddy pool of water” in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mróshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

l ṹts¹ bn zḥk bn Ṽlwhb

By ṹts¹ son of Zḥk son of Ṽlwhb

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria

[Latitude/Longitude: 32.844275 / 37.19575]

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between Al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads...
out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0007609.html

C 4406 (Dussaud M 515; LP 926)

\( l\ s^h m\ bn\ fny\ bn\ fn(y')\ bn\ qdm\ bn\ fn(y')\ bn\ gyrt\ w\ wgm\ 1^\*\ h\ h \)

By S’hm son of Fny son of {Fny} son of Qdm son of {Fny} son of Ġyr’t and he grieved for his brother

Commentary:
C identifies Dussaud M 515 with LP 926, although the copies differ considerably in the second half of the text. However, LP 926 is one of the inscriptions copied by one of the "servants of the Princeton University Archaeological Expedition" (Littmann 1943: iii), who would not have known Safaitic, and this may explain the differences.

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria

[Latitude/Longitude: 32.84275 / 37.19575]

These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

C 4408 (Dussaud M 516; LP 895; Mr.A 9)

l mجري b(n) {f}d bn {f}d bn {f}t{f}(m) bn {f}s{h} bn {f}s{h} (w) هرس {w} -h f h lt s{h}lm l - ُ f هرس (w) {w}wr l - ُ أ wr

By Mجري son of {f}d son of عون son of (؟m) son of سم b(n) ج (؟) and he was on the look out for his brothers (he missed his brothers). So, O لج (grant) security to whoever keeps watch and blindness to whoever scratches out the inscription.

Apparatus Criticus:
C: (w)﴾d﴿m﴾ f﴿t﴿m); (s)﴾h﴿ for﴾s﴿h﴿; ُ﴾ -h for﴾w﴿ -h; ه رس﴾ w﴿﴾ w﴿﴾ w﴿﴾ w﴿﴾ w﴿﴾ w﴿﴿w﴿wr﴿ for ه رس﴾ w﴿﴾ w﴿﴿ l - ُ أ wr﴿}

Provenance:
Al-Mrōshan, Al-Suwaydah, Syria
[Latitude/Longitude: 32.844275 / 37.19575]
According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

Al-Mrōshan, Al-Suwaydah, Syria

[Latitude/Longitude: 32.844275 / 37.19575]

According to Dussaud & Macler (1903: 151), repeated by C, this inscription was found between al-Namārah and Ghadir al-Darb, but Littmann is more specific saying that it comes from Al-Mrōshan (1904: 156). This consists of four long, low mounds, running roughly east-west in a flat area where the Wādī al-Gharz spreads out. These mounds create a series of "gorges" perhaps 3 m high in the wadi which is otherwise very flat and at this point hardly distinguishable from the surrounding area, the "wadi-bed" consisting of several channels approximately 30–80 cm deep and 4–10 m wide. The southerly three mounds are covered with graves and enclosures. Much of the rock is not suitable for inscribing. It was visited in 1995 by the Safaitic Epigraphic Survey Programme and all the published texts it rediscovered came from the most northerly of the southern three mounds, and most were concentrated at its eastern end.

Provenance:
Between Al-Namārah and Ghadir al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadir al-Darb" (1903: 151 [553]) and describe Ghadir al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Littmann and members of the Princeton (1904–1905) expeditions, and he locates them at al-Mṛōshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.

Provenance:
Between Al-Namārah and Ghadīr al-Darb, Al-Suwaydah, Syria
Dussaud & Macler, followed by C, give the provenance of this inscription simply as "between al-Namārah and Ghadīr al-Darb" (1903: 151 [553]) and describe Ghadīr al-Darb as "a muddy pool of water" in Wādī al-Gharz (1903: 27 [429]). According to Geonames its co-ordinates are Latitude 32.8333, Longitude 37.0667, but this places it some 220 m north of the left bank of the wadi. In addition, several of the texts to which Dussaud & Macler give this vague provenance were also copied by Lithmann and members of the the Princeton (1904–1905) expeditions, and he locates them at al-Mróshan. However, for the inscriptions, such as this, which were copied only by Dussaud & Macler, it is impossible to give a more precise provenance.
