 Apparently both banks of Wâdi al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbâshi track and its debouchment into the Ruhbah, the inscriptions are in a series of outcrops and Cairns on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruhbah (where there are approximately 80–120 texts). Note that several texts in the group C4872–4936, which C places on the “right bank” of Wâdi al-Gharz, were actually found on the left bank, and that C4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

The debouchment of Wādī Gharz into the Rubbah, Rif Dimashq, Syria

(Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbăshī track and its debouchment into the Rubbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Rubbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank; and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

The debouchment of Wādī Gharz into the Ruhbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]

Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbahi track and its debouchment into the Ruhbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruhbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the "right bank" of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

The debouchment of Wādī Gharz into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāšī track and its debouchment into the Ruḥbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruḥbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

[Latitude/Longitude: 33.1847 / 36.9501]

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruḡm al-Mar‘ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruḡm al-Mar‘ah, but this can only be a very approximate position. Note that this site is not the same as Ḥuḡyar al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

[Latitude/Longitude: 33.1847 / 36.9501]

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruǧm al-Mar‘ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruǧm al-Mar‘ah, but this can only be a very approximate position. Note that this site is not the same as Huǧayr al-Helle, where C 2 was found, which is on the north-western edge of the Šafā.

C: l b by ṣḏw

Provenance:
Haǧar-al-Helle, Rif Dimashq, Syria
[Longitude/Latitude: 33.1847 / 36.9501]

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruǧm al-Marʿah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruǧm al-Marʿah, but this can only be a very approximate position. Note that this site is not the same as Huǧayr al-Helle, where C 2 was found, which is on the north-western edge of the Ṣafā.

[Latitude/Longitude: 33.1847 / 36.9501]

We have not been able to identify this site with any certainty. According to C (p. 91), it is about 30 km west of Ruğm al-Mar'ah. The co-ordinates we have given it are therefore taken from a point 30 km due west of Ruğm al-Mar'ah, but this can only be a very approximate position. Note that this site is not the same as Huğayr al-Helle, where C 2 was found, which is on the north-western edge of the Šafa.

Between Khirbat al-Umbāšī and Ğabal al-'Arab (Ğabal al-Drūz), Al-Suwaydah, Syria

C wrongly placed this text with those from the cairn north of Khirbat al-Umbāšī. However, it is clear from Dussaud & Macler 1901: 121 that it was not copied there (even if their "Nebech" = Umbāšī) but "1 hour and 25 minutes further" "on the track which leads to the Ğabal al-Drūz". They did not copy any of the texts at the cairn they found near Khirbat al-Nebech.

I ṉg bn ḥmlt

By Ṣḥḥ son of Ḥmlt

Apparatus Criticus:
C: l ṗg bn ḥml(y)t

Provenance:
AlʿUdaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Provenance:
Al-ʿUdaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria

[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868-1877: 144).

Provenance:
Al-ʿUdaysīyah (at the southern end of the Rubbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Rubbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Bayḍā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts \( V 56–130 = C 924–1016 \). Near to one of them we found another quarry" (1868-1877: 144).

C 992 (Waddington 82 a; Vogüé 109 a)

I ḍfrn bn ml bn Ṣʾl

By ḍfrn son of Ml son of Ṣʾl

Provenance:
Al-ʿUdaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wāḍī al-Shām), Rif Dimashq, Syria

[Latitude/Longitude:] 32.97958 / 37.32001

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

I drʾl bn (ʾ)ḥl(m) (b)(n)----

By Drʾl son of ḫlm son of

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydāʾ. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868-1877: 144).

C 1035 (Waddington 52 a)

l tfl bn (b)ʾ[s]{n}

By Tfl son of {Bʾsn}

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Rubbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Provenance:
Al-ʿUdaysīyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysīyah. He writes: "Strictly speaking, the name al-ʿUdaysīyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins; one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysīyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Al-ʿUdaysiyah (at the southern end of the Ruḥbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruḥbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-ʿaydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

C 1098 (Dussaud V 29 bis)

Wasm

Provenance:
Al-ʿUdaysiyah (at the southern end of the Ruhbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria

[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyah. He writes: "Strictly speaking, the name al-ʿUdaysiyah refers to a point on the [southern] end of the Ruhbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Al-ʿUdaysiyyah (at the southern end of the Rubbah, on the west (i.e. left) bank of Wādī al-Shām), Rif Dimashq, Syria

[Latitude/Longitude: 32.97958 / 37.32001]

Note that the co-ordinates are estimates. De Vogüé gives the fullest description of al-ʿUdaysiyyah. He writes:

"Strictly speaking, the name al-ʿUdaysiyyah refers to a point on the [southern] end of the Rubbah where there are rough ruins: one can distinguish a small tower, and some surrounding walls in dry-stonework. All around these remains, are traces of stoneworking: fragments, quarried blocks, unfinished slabs strewn all over the ground. Tradition has it that this was the quarry for Khirbat al-Baydā. At Al-ʿUdaysiyyah itself there are no inscriptions, but within a fairly short radius of this point there are several nameless cairns which are covered with them. We explored four of these which furnished us with texts [V 56–130 = C 924–1016]. Near to one of them we found another quarry" (1868–1877: 144).

Provenance:
Riğm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Riğm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riğm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riğm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riğm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riğm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Riǧm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co-ordinates given here are very approximate.

[Latitude/Longitude: 32.9764 / 37.3136]

The name "Riǧm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-Udasyiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co ordinates given here are very approximate.

Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riḏm Qaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as “Riḏm Qaʿqūl”. Note that the co-ordinates given here are very approximate.

By ʾGYRʾL son of ʾŠʾMʾ

Provenance:
Riḏm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name “Riḏm Qaʿqūl” was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the “Riḏm Qaʿqūl” copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riḏm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdayṣiyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1187 (Vogüé 389 c; Waddington 189 c)

[I] ‘qrb bn m[d/f/f] bn s²m[t] [b][n] b[l/l] b w h[il h-] [d][f/r] w d(t)‘ h- w(r)d b- s[l]t

{By} ‘qrb son of (Md’) son of [S²mt] [son of] {l[l]} and he camped in this place and spent the season of the later rains at this watering hole in S[l]t.

Apparatus Criticus:
C: Hor [I];

Commentary:
C’s reading is taken from Waddington’s copy but it is difficult to reconcile this with de Vogüé’s, both in terms of the lay-out and the letters. Waddington 189 was never fully published. It does not appear at all in Ryckmans G 1939, and only inscriptions 189 c and e are published in C, and in the text rather than on the plates. The reason for this is not explained. In this chaotic situation we have followed C in taking the reading from Waddington’s copy with occasional “corrections” from de Vogüé’s, but it should be noted that it is extremely uncertain. De Vogüé’s copy shows that the l before the first name is the last letter of C 1186. There is a small curved mark above the “of ‘qrb but this cannot be a lám auctoris. The arrangement on de Vogüé’s copy suggests that the major part of the C 1186 beginning f h gd’wql ... may well belong to this text rather than to C 1186, though it was not apparently copied as such by Waddington. So, given the uncertainties about C 1187, it seems safer to retain C’s arrangement until such as time as the stone can be rediscovered.

Provenance:
Rijm Qaʿqūl, Rif Dimashq, Syria

[Latitude/Longitude: 32.9764 / 37.3136]
The name “Rijm Qaʿqūl” was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the “Rijm Qaʿqūl” copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were

Provenance:
Riǧm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32°9764 / 37°3136]
The name "Riǧm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruhba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co-ordinates given here are very approximate.

The name "Riǧm Ḏaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Ḏaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Riǧm Ḏaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Ḏaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Ḏaʿqūl". Note that the co-ordinates given here are very approximate.

C 1238 (Wetzstein 42)

l s¹wd bn ʿṣ(d)

By ʿṣ(d) son of ʿṣ(d)

Provenance:
Riǧm ʿQaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]

The name “Riǧm ʿQaʿqūl” was applied by fourteenth-century travellers to at least four large outcrops at the southern end of the Rubba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the “Riǧm ʿQaʿqūl” copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm ʿQaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaad & Mader but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm ʿQaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as “Riǧm ʿQaʿqūl”. Note that the co-ordinates given here are very approximate.

[Latitude/Longitude: 32.9764 / 37.3136]

The name "Riigung Qa’qūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruhba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riigung Qa’qūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-'Udaysiyah to Riigung Qa’qūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riigung Qa’qūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riigung Qa’qūl". Note that the co-ordinates given here are very approximate.

C: ʾḥy(y)t for ḥḥy ḥ.t; ḥḥ(y)t for ḥ[m]q;

Provenance:
Riǧm Ḥaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.9764 / 37.3136]
The name "Rijm Ḥaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubha, to the south and south-west of the modern water tower. This helps to explain
the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaisyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

This helps to explain the curious fact that there is no overlapping between the "Riǧm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Qaʿqūl". Note that the co-ordinates given here are very approximate.

[Latitude/Longitude: 32.97958 / 37.32001]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-Udaysiyah to Riǧm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Qaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qa'qūl". Note that the co-ordinates given here are very approximate.

C 1340 (Dussaud V 67)

l sʾlt[d][n] b[n] m[n]ʾṣʾnm

By Sʾlt dn son of Mnʾṭm

Provenance:
Riǧm ʿQaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name “Riǧm ʿQaʿqūl” was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the “Riǧm ʿQaʿqūl” copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-Udaysiyah to Riǧm ʿQaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Mader but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm ʿQaʿqūl “A” were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as “Riǧm ʿQaʿqūl”. Note that the co-ordinates given here are very approximate.

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0003721.html
It is therefore likely that this is the place he regarded as "Rijm Qaʿqūl". Note that de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and Dusaud & Macler, but did not find those where Waddington wrote that it was 10 minutes [ride] from al-Travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-Rubha, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dusaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdasiyyah to Rijm Qaʿqūl, Dusaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dusaud & Macler but did not find those where de Vogüé and Waddington had worked. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

C 1357 (Dussaud V 82)

1 b 3 s h bn n t h ḥmr

By B s h son of N t is [the drawing of] the donkey

Provenance:
Rijm Qaʿqūl, Rif Dimashq, Syria
[Latitude/Longitude: 32.97958 / 37.32001]
The name "Rijm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Rubba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rijm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Rijm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rijm Qaʿqūl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". The name "Rījm Qaʿqūl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Rījm Qaʿqūl" copies of de Vogüé, Wetstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysīyah to Rījm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetstein and by Dussaud & Mader, but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rījm Qaʿqūl "A" were all texts copied by
Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

This helps to explain the curious fact that there is no overlapping between the "Rūjm Qaʿqūl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyah to Rūjm Qaʿqūl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Mader but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Rūjm Qaʿqūl "A" were all texts copied by
Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Rijm Qaʿqūl". Note that the co-ordinates given here are very approximate.

**C 1409 (Dussaud V 121 b)**
C 1410 (Dussaud V 122)

1 mlʾy bn ḥṭʾ bn nl

By Mʾly son of Yḥʾt son of Nl

Provenance:
Riǧm Ḍ[q]ʾl, Rif Dimashq, Syria

[Latitude/Longitude: 32.97958 / 37.32001]
The name "Riǧm Ḍ[q]ʾl" was applied by nineteenth-century travellers to at least four large outcrops at the southern end of the Ruḥba, to the south and south-west of the modern water tower. This helps to explain the curious fact that there is no overlapping between the "Riǧm Ḍ[q]ʾl" copies of de Vogüé, Wetzstein and Dussaud & Macler, and only in a very few cases between those of de Vogüé and Waddington who were travelling together. The probability that there were multiple cairns with this name is supported by the fact that while Waddington wrote that it was 10 minutes [ride] from al-ʿUdaysiyyah to Riǧm Ḍ[q]ʾl, Dussaud & Macler say that the journey between the two took 30 minutes. In 1995, the Safaitic Epigraphic Survey Programme identified the sites visited by Wetzstein and by Dussaud & Macler but did not find those where de Vogüé and Waddington had worked. The inscriptions found at Riǧm Ḍ[q]ʾl "A" were all texts copied by Wetzstein and no one else. It is likely therefore that this is the place he regarded as "Riǧm Ḍ[q]ʾl". Note that the co-ordinates given here are very approximate.

C 1439 (Dussaud V 329)

I (n) r bn nẓrt

By Nr son of Nẓrt

Provenance:
On the right (= east) bank of Wādī al-Gharz near its debouchment into the Ruḥbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.953 / 37.294]
Dussaud & Macler (1901: 104) say that these inscriptions (Dussaud V 312–392) come from right bank of
Wādī al-Gharz. C is therefore incorrect in placing them "beside the track from Wādī al-Gharz to Khirbat al-
Hubayrīyah. Note that C spells the latter with an initial "Ḥ", whereas according to geonames.org it should be
"H".

Provenance:
On the right (= east) bank of Wādī al-Gharz near its debouchment into the Ruḥbah, Rif Dimashq, Syria [Latitude/Longitude: 32.953 / 37.294]

Dusaud & Macler (1901: 104) say that these inscriptions (Dusaud V 312–392) come from right bank of Wādī al-Gharz. C is therefore incorrect in placing them "beside the track from Wādī al-Gharz to Khirbat al-Hubayriyah. Note that C spells the latter with an initial "Ḥ", whereas according to geonames.org it should be "Ḥ".

C 1487 (Dunand 309)

By Ḥydṭ son of (ḥḥt) son of Sʾmk son of (Sʾwr)

Provenance:
Zalaf (a) "Camp Krazinski", Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. The Safaitic Epigraphic Survey Programme in 1995 was unable to locate the camp which C calls "Camp Krazinski" (Zalaf (a)).

Zalaf (b) "Near the track leading to Ǧabal Says" (C. p. 209), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ǧabal Says" the Dunands meant, or whereabouts near this track, they found these in inscriptions.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qûl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ǧabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

Zalaf (b) "Near the track leading to Ġabal Says" (C p. 209), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover
a large area surrounding the place itself. This is subdivided into areas to which we have given the names
Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīḥm Qa‘qūl,
but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the
descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
Unfortunately, it is impossible at this stage to identify which "track leading to Ġabal Says" the Dunands
meant, or whereabouts near this track, they found these inscriptions.

Zalaf (b) "Near the track leading to Ġabal Says" (C p. 209), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover
a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m), C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which “track leading to Ġabal Says” the Dunands meant, or whereabouts near this track, they found these inscriptions.

C 1672 (Dunand 398 a)

I ḥt bn tm bn ḥt

By ḥt son of tm son of ḥt

Provenance:
Zalaf (b) "Near the track leading to Ġabal Says" (C p. 209), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which “track leading to Ġabal Says” the Dunands meant, or whereabouts near this track, they found these inscriptions.

By Lꜰ son of Sʾmdʾl son of Qn

Provenance:
Zalaf (b) "Near the track leading to Ġabal Says" (C. p. 209), Rif Dimashq, Syria  
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" covers a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which "track leading to Ġabal Says" the Dunands meant, or whereabouts near this track, they found these inscriptions.

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

C: l’dy bn s²kr bn ʾdm h- bkrt

Provenance:
Zalaf (c) “To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā [?]” (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rūm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the “place near the larger khabrah”.

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

By Mzkr son of ḡs{3}l is the young she-camel

Provenance:
Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā (?)" (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrā (?)" (C p. 225), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the “place near the larger khabrah”.

MST p. 9 n.45: w qыт h- hwy - and he spent the dry season at the pools MNH 320 and n. 118: "he spent the dry season at the pools --- before migrating to the hamæd with some sheep ".

**Provenance:**

Zalaf (c) "To the south of Zalaf in a place near the larger khabrah [a depression in the plain where water gathers] or Khabrah kubrà [?]" (C p. 225), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Rîm Qa'qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify the "place near the larger khabrah".

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāh, this is.

Zalaf (d) “On the right of the track leading to the Ruhbah” (C. p. 249), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl,
but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāḥ, this is.

C 1939 (Dunand 535 b)

Iʾtḥmn bn sʾd bn ʾṣḥ bn ḫl bn sʾwd bn Iʾtḥmn bn whʾl bn ʾnbʾr

By Lʾṯḥm son of Sʾd son of Ṣḥ son of Ḫl son of Sʾwd son of Lʾṯḥm son of Whʾl son of Ṣʾnbʾr

Provenance:
Zalaf (d) "On the right of the track leading to the Ruḥbah" (C p. 249), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riqm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

C: {b}d for s²d

Provenance:
Zalaf (d) "On the right of the track leading to the Ruḥbāh" (C p. 249), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover
a large area surrounding the place itself. This is subdivided into areas to which we have given the names
Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl,
but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the
descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāh, this
is.

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruhbāḥ, this is.

By Mġyr son of S¹wd son of Wgm son of Ms¹k and he pastured this valley on spring herbage {and} {0} {}?{may he be secure} from {enemies}

Apparatus Criticus:
C: wʾm for wgm

Provenance:
Zalaf (d) "On the right of the track leading to the Ruḥbah" (C p. 249), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

Zalaf (d) "On the right of the track leading to the Ruḥbāḥ" (C p. 249), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199). Following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāḥ, this is.

lʿ (d) b[n] (ʿ)ḥ

By ṣd son of ḫḥ

Provenance:
Zalaf (d) “On the right of the track leading to the Rubbah” (C p. 249), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Rubbah, this is.

C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rifām Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbāh, this is.

C: l ṭ [b][n] f y [b][n] {w}ʾd b n bʾtn w sʾrt ṭ- (s)dqʾl (w) r bʾl f rʾl w mʾt f ]r]sʾ] w t n r h- sʾmy b- h- d(r) ]h ]l t r[w]h w h bʾlsʾ(m)[n]---- “By ṭ ṭ son of Fty son of Wʾd son of bʾtn and a sign for {Sqʾl} (and) Rbʾl and he was pierced and [died] and Sʾmt [should be Sʾmy] left and fled near this place [?] and O Lt relief [and] O {Bʾlsʾmn}----”

Al-Jallad 2015: 235: w sʾrt ṭ- (h)dqʾ bγγ "and he served in a troop against the [walled enclosure] of bγγ"

Commentary:

Safaitic graffiti by slaves are relatively common and they give their personal name but the genealogy of their master. On sʾrt meaning “to serve in an army unit” see Macdonald 2014: 159–160, and n. 78. The “borders of bγγ” could refer to the territory of Edessa which had a series of kings named Abgar. It is interesting that slaves also served in army units. See also KRS 1024 and RQA 10 for examples where sʾrt ṭ- means “served in an army unit under [someone]".

This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

\l y’s’t bn sʾqm bn yʾḍ

By Yʾsʾt son of Sʾqm son of Yʾḍ

Provenance:

Zalaf (d) "On the right of the track leading to the Ruḥbah" (C p. 249), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which of the many tracks leading to the Ruḥbah, this is.

C 2143 (Dunand 600 a)

l n’mn bn kn bn n’m[n]

By N’mn son of Kn son of N’mn

Provenance:
Zalaf (e) "On the right of the track leading to Damascus" (C p. 279), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa’qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

[Zalaf] itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C. p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

By Wrd son of ḫbd son of Mrt and he grieved for Ks1ṭ

**Provenance:**
Zalaf (e) "On the right of the track leading to Damascus" (C p. 279), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qul, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

Provenance:
Zalaf (e) “On the right of the track leading to Damascus” (C p. 279), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C p. 199), following the Dunands, says that Zalaf is about 10 km south of Rif Dimashq, Syria, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

Provenance:

Zalaf (f) "In the neighbourhood of Zalaf, on the west side of the track leading to Damascus" (C p. 291), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is impossible at this stage to identify which track leading to Damascus, this is.

C 2261 (Dunand 642 c)

(l) lqtʾ bn khl

By Lqtʾ son of Khl

Provenance:
Zalaf (g) “On the east side of the track leading to al-Namārah “ (C p. 294), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rīgm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Unfortunately, it is not known whether the modern road which runs past Zalaf and al-Namārah follows the track mentioned here, or where to the east of it the inscriptions may have been found.

Provenance:
Zalaf (\( l\)) "Near the Roman road leading from al-Namārah to the Ruḥbah, on the west side" (C. p. 298), Rif Dimashq, Syria

[Latitude/Longitude: 32.9035 / 37.2962]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (\( a\)) to Zalaf (\( m\)). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Ruḥbah. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the road approximately 37.2962, northern end approximately 37.2951

Provenance:
Zalaf (i) "Near the Roman road leading from al-Namārah to the Rubbah, on the west side" (C. p. 298), Rif Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C. (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rûm Qaʿqûl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to the southern edge of the Rubbah. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the road approximately 37.2962, northern end approximately 37.2951

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʾqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate. Approximately, 1.90 km north of the "island" of al-Namārah there is a stone-built barrier, approximately 750 m long from which a wide track cleared of stones runs roughly northwards for approximately 5.6 km to
the southern edge of the Rubbah. The road was first discovered by C.C. Graham (1858: 239 and map) and was discussed by von Oppenheim (1899–1900, i: 225–226) and Poidebard (1928: 119, fig. 1, pl. XL). There is no firm evidence that it is Roman.

Latitude: southern end of the road approximately 32.9035, northern end approximately 32.9504
Longitude: southern end of the road approximately 37.2962, northern end approximately 37.2951

C 2322 (Dunand 3)

\[l\text{'}ṣṣ\text{ bn qt}'n \text{ bn hgml}\]

By 'ṣṣ son of Qt'n son of Hgml

**Provenance:**
Zalaf (l) "In the neighbourhood of Zalaf, near Wâdî al-Shâm" (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Rif Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām 
*C p. 304*, Rīf Dimashq, Syria

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

I s²wr bn fdy bn ḥrb

By S wr son of Fdy son of Ḫrb

Apparatus Criticus:
C: 1 ( ) s²wr bn fdy bn ḥrb
Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādi al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). C (p. 199), following the Dunands, says that Zalaf is about 10 km south of Riǧm Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Provenance:
Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām " (C p. 304), Rif Dimashq, Syria
[Latitude/Longitude: 32.9269 / 37.3296]
Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Rām Qaʿqūl, but in fact it is more like 5.5 km to the south-south-west. Since "Zalaf" is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.

Zalaf (j) "In the neighbourhood of Zalaf, near Wādī al-Shām * (C p. 304), Rif Dimashq, Syria

[Latitude/Longitude: 32.9269 / 37.3296]

Zalaf itself consists of three, or possibly more, wells and some trees, but the Dunands used its name to cover a large area surrounding the place itself. This is subdivided into areas to which we have given the names Zalaf (a) to Zalaf (m). (C p. 199), following the Dunands, says that Zalaf is about 10 km south of Riğm Qa‘qūl, but in fact it is more like 5.5 km to the south-south-west. Since “Zalaf” is used in C of a wide area, and the descriptions of the sub-areas are often very vague, the co-ordinates given here are necessarily approximate.
