2017
Geraldine Margaret Harmsworth King was an excellent scholar who played an important part in deepening our understanding of the Ancient North Arabian inscriptions and providing a much sounder basis for their study. She undertook a number of expeditions to the deserts of Jordan and Syria, and the mountains of Dhofar, recording thousands of inscriptions, which she then worked on patiently and perceptively over many years.

In 1986 and 1987, she single-handedly recorded over 1500 Hismaic inscriptions in the south of Jordan. She produced an edition of most of these in her doctoral thesis, completed in 1990, in which she undertook the first detailed analysis of every aspect of this type of Ancient North Arabian inscription. Although she never published her thesis, it quickly became, and has remained, the standard reference work on the subject. A retyped version of Geraldine’s thesis is available on the website Ancient Arabia: Languages and Cultures (http://www.ancientarabia.co.uk/)

Between January and March 1989, Geraldine and her colleague Becca Montague spent six weeks in the basalt desert of north-eastern Jordan in freezing temperatures recording inscriptions and sites which were about to be destroyed by bull-dozers clearing a network of tracks for huge machines searching for oil-bearing rocks. Geraldine recorded over 3,300 inscriptions and a huge number of rock-drawings, and Becca recorded over 400 sites. Geraldine had almost finished preparing the inscriptions for publication when she died, and they are included in OClANA under the siglum KRS “King Rescue Survey”).

In the 1980s and early 1990s, Ḍāliʿ Ahmad Al-Mabāsh Al-Shabīr discovered hundreds of painted and carved texts in the mountains of Dhofar, in a previously unknown form of the South Semitic script. He asked Geraldine to mount an expedition with him to record these and in 1991 and 1992 they recorded some 900. Geraldine wrote a very full report and even designed a font to represent the letters of the inscriptions in order to prepare a concordance, a prerequisite for any decipherment. This can be downloaded from the website mentioned above.

In 1995 and 1996 she joined the first two seasons of the Safaitic Epigraphic Survey Programme which recorded over 4000 Safaitic inscriptions in southern Syria. She also worked for many years on the Safaitic Database, on which OClANA was founded.

Geraldine was not only an excellent scholar and an indefatigable field-worker, but a warm, loyal, generous, and affectionate friend. She could always be relied on in any circumstances, however gruelling, and showed great courage and endurance when required. But she was also gentle and funny and very kind. She will be fondly remembered by all who were lucky enough to come into contact with her.1

The completion of OCIANA’s Second Phase would not have been possible without the collaboration and active involvement of many people and institutions. Firstly, we are deeply indebted to the two institutions which provided the basis on which this Phase of OCIANA was founded and without which it could not have taken place: the United Kingdom’s Arts and Humanities Research Council, which awarded the project a generous grant for three and a half years from September 2013, and the Khalili Research Centre, University of Oxford, which provided working space, facilities, and administrative resources for the Project over this period. We are immensely grateful to both these institutions.

Secondly, we would like to thank Professor Jeremy Johns, director of the Khalili Research Centre and administrative director of OCIANA, without whom it would have been impossible to undertake both the first and second phases of the Project. Indeed, it was his idea to create a project to convert Michael Macdonald’s Safaitic Database, of some 15,000 Safaitic inscriptions, into the OCIANA with over 40,000 inscriptions in all the Ancient North Arabian scripts, and to publish the thousands of inscriptions which Geraldine King had prepared for publication before her untimely death. Considering that his own fields are far removed from pre-Islamic epigraphy, this was extremely generous and OCIANA and those who use it owe him a great debt.

Daniel Burt, who is in charge of IT at the Khalili Research Centre, set up the web sites of the First Phase and developed the OCIANA database in the Second Phase. He worked incredibly hard, and with remarkable patience and good humour, to meet the incessant needs of the epigraphists who were entering the data. The database he developed, where for each of more than 40,000 inscriptions the user will find the reading and translation of the text, plus the apparatus criticus, commentary, all available information, references, and images on a single page, and can search for onomastics, grammatical items, subjects, and genealogies, is something for which we are immensely grateful and of which he can be justly proud. The publication of the individual collections as pdfs, of which the present volume is an example, was also his idea.

We are also most grateful to Jennifer Brooke Lockie who scanned, and supervised the scanning, of over 100,000 black-and-white negatives, colour slides and prints from a number of collections, so that they could be inserted into the OCIANA database.

The work on OCIANA has been greatly enriched by frequent discussions with Dr Ahmad Al-Jallad and his doctoral students at the University of Leiden, The Netherlands. They have often suggested interesting and very plausible interpretations of unusual or unique expressions in the inscriptions, and their research, which they have generously shared with the OCIANA team, has been of great value to the project.

The inclusion of so many inscriptions and photographs would not have been possible without the generous collaboration of scholars and institutions throughout the world. These have given permission for their published inscriptions to be entered in OCIANA, and have often provided the project with photographs not included in their publications, or have sent us photographs of previously unpublished inscriptions for inclusion. In the case of the Safaitic corpus these are:

Introduction

Safaitic

The Safaitic inscriptions are almost entirely graffiti carved by nomads living in what is now southern Syria, north-eastern Jordan and northern Saudi Arabia between the final centuries BC and the early centuries AD. They were first brought to the attention of the Western world by Cyril C. Graham and Julius Wetzstein who independently, in 1858, explored the ḫarrāḥ, or desert of broken up lava sheets east of Gābal al-ʿArab in southern Syria. Because the most striking geological feature in this area is the Ṣafā, an area of unbroken lava sheets, near the eastern edges of which Graham copied his first inscriptions, some scholars incorrectly extended the term Ṣafā to the whole of the Syrian ḫarrāḥ, and so labelled the inscriptions found there as “Safaitic”. This is an unfortunate misnomer, since the Ṣafā is the one part of this area where no Safaitic inscriptions have been found!4

The area east, south, and south-east of Gābal al-ʿArab — stretching across south-eastern Syria and north-eastern Jordan — is covered by a carpet of broken-up lava. Over the millennia, the interaction of the chemicals in these pieces of lava with the chemicals in the atmosphere has produced a thick black patina on the parts of these rocks and boulders which have been exposed.5 When this is pierced, by being scratched, incised or hammered, the light grey of the lava’s natural colour can be seen and this looks almost white against the black of the surrounding patina. Clearly this makes this basalt an attractive surface to carve on, even though it is extremely hard.

The rock underlying the basalt is limestone which contains large numbers of flints, and these, as well as broken pieces of basalt, can be used as carving tools. At a certain point, in south-eastern Syria and north-eastern Jordan, the basalt (ḥarrāḥ) peters out and the limestone desert (ḥamād), which lay under the basalt covering, continues into what is now western Iraq. A few Safaitic inscriptions have been found in the ḥamād, but, since this limestone is much softer than basalt, many texts have probably been worn away, or disappeared, or have been rendered very difficult to find and to read. Moreover, no expeditions have been mounted to search for Safaitic inscriptions in this area and so the only texts known from it have been chance finds. On the other hand, we know that the authors of the graffiti went to the ḥamād, which they called ṭābtir, after the first rains in October and stayed there as long as the pasture continued, before returning to the ḫarrāḥ where water and pasture survived for much longer and where there were permanent water sources.7

The authors of the graffiti also went south into the great sand desert of the Nefūd in northern Arabia — probably in winter when camels calve, since the young camels are very susceptible to the winter cold further north — and left numerous graffiti on the sandstone rocks of this region.

For sixty years after Safaitic inscriptions were first discovered, they were searched for only in Syria. Two of the most productive of these surveys took place in the early twentieth century. The first was the Princeton University Archaeological Expeditions to Syria in 1904–1905 and 1909, on which the great German scholar, Enno Littmann, and his helpers copied some 1300 inscriptions which were published in 1943. The second was mounted by the French archaeologists Maurice Dunand and his wife Mireille in the 1920s, who copied almost 3,000 inscriptions in the area. They gave their copies to Professor Gonzague Ryckmans to include in the Corpus Inscriptionum Semiticarum Pars 5, which he was editing for the Académie des Inscriptions et Belles-Lettres in Paris which aimed to collect together all the Safaitic inscriptions known at the time.8 Unfortunately, almost all of the inscriptions in the Corpus were known only from hand copies often made by people unfamiliar with the Safaitic script. This meant that there were many uncertain readings and dubious provenances. So, in 1995, Michael Macdonald established the Safaitic Epigraphic Survey Programme (SESP) to try to rediscover these inscriptions, photograph them and record their locations as accurately as possible (this was, of course, a period before GPS was generally available). Most of the sites were discovered in the 1995 season, and the subsequent seasons between 1996 and 2003 were spent making a complete survey of the site of al-Ṭsāwī, north of Al-Namārāḥ, where Littmann had copied some 450 inscriptions and the SESP recorded these and another 3000 more.

---

2 Formerly Gābal al-Drūz, ancient Gābal Hawrān.
4 See Macdonald 2009, II: 306. Nineteenth-century German scholars much more appropriately called them Harra-Inschriften (for instance Müller DH 1876).
5 Those parts which have always been next to the earth have retained their natural grey pumice colour.
6 From approximately 32.7432 N 37.9137 E to 31.9126 N 38.0479 E.
8 This aim was largely achieved except for most of the inscriptions in Littmann 1943 were not included and only about half of those recorded by Rees (see below).
Because they had only been searched for in Syria, it was generally assumed that Safaitic inscriptions occurred only there.\footnote{Dussaud 1929: 145. Littmann had recorded a few in and around Umm al-Ǧīmāl in Jordan, but this was close to the Jordanian-Syrian border.} However, in the 1920s, Group Captain Rees, an officer in the British Royal Air Force made numerous flights across the ḫarrāḥ in north-east Jordan taking mail between Amman and Baghdad. During these flights, he noticed some interesting structures in the ḫarrāḥ below him and landed to examine them. There, he discovered and copied the first Safaitic inscriptions to be found in north-eastern Jordan. Later, the expeditions F.V. Winnett and G. Lanceker Harding in the 1950s and 1960s showed how incredibly rich this area was in Safaitic inscriptions, and numerous other expeditions have since been mounted by Jordanian and foreign scholars, one of the most notable of which was the Basalt Desert Rescue Survey led by Geraldine King in 1989 \cite[see the dedication]{1989}. Finally, the great Palestinian scholar Mahmūd Al-Ghūl was the first to search for and find Safaitic inscriptions in northern Arabia and he has been followed by many Saudi scholars.

There are a few Safaitic inscriptions in more far off places: the area around Palmyra in the north,\footnote{See Ingholt, Starcky & Ryckmans G 1951.} Madāʾin Sāliḥ\footnote{See JSSaf 1 in OCIANA.} and Hāʾil\footnote{See, for instance, HU 262, 789c, etc.} in the south, and Mount Hermon,\footnote{See Macdonald 2009: Addenda p. 2–3.} the coast of Lebanon\footnote{See Wasta 1.} and even Pompeii\footnote{See Calzini Gysens 1990.} in the west. Tens of thousands of Safaitic graffiti are already known, and every expedition finds more. As an example, in 2015 the Badia Epigraphic Survey, which is linked to OCIANA, mounted a 3-week survey in a small area of the Jordanian ħarrāḥ and recorded some 10,000 inscriptions.\footnote{The survey was the initiative of Dr Ali Al-Manaser and the staff consisted of Joseph O’Hara, Chiara della Puppa, and Michael Macdonald. We are most grateful to the Department of Antiquities of Jordan for giving permission for the survey; to the Council for British Research in the Levant, the Lorne Thyssen Research Fund for Ancient World Topics at Wolfson College Oxford and the Seven Pillars of Wisdom Trust, for their financial support; and to the Badia Research Centre at Al-Ṣafāwī, Jordan, for their hospitality in the field.}

Thus, it should be noted that work continues on the Safaitic, as well as on other Ancient North Arabian, inscriptions, and that OCIANA will therefore always be a work in progress. Moreover, as more texts are discovered our understanding of the language and script deepens and this will inevitably mean that changes have to be made to the readings and interpretations of some of the inscriptions already in OCIANA. In its next phases, based at the University of Leiden under the leadership of Dr Ahmad Al-Jallad and Michael Macdonald, all the known Thamudic inscriptions will be added to OCIANA, as well as newly discovered Safaitic and other inscriptions from ancient North Arabia. This means that the online database will continue to be updated and new editions of the pdf publications will appear at regular intervals.

Dr Ali Al-Manaser entered tens of thousands of Safaitic inscriptions into the OCIANA. These joined the thousands which Geraldine King, Laila Nehme, and Michael Macdonald had entered into the Safaitic Database from 1994 onwards and which had been incorporated into OCIANA. Ali Al-Manaser also searched out unpublished collections of Safaitic inscriptions in MA and PhD theses throughout the world, as well as individual texts placed on the internet, and unpublished collections recorded by scholars over the years, and successfully invited authors and recorders to allow these texts to be entered into the OCIANA. In many cases, the same inscription had been recorded, and often published, by several different people and was said to come from different places, but in almost all cases Ali Al-Manaser was able to identify these duplicates and work out the correct provenance of the texts. It is a truly magnificent achievement which has for the first time since the publication of the Corpus in 1950–1951, presented almost all the Safaitic inscriptions known today as an orderly and easily searchable collection.\footnote{“Almost all” because new inscriptions are appearing even as this “Preliminary edition of OCIANA” is being published, and there will inevitably be some which we have missed.}

We are also most grateful to Dr Ahmad Al-Jallad, of the University of Leiden, for entering some Safaitic inscriptions and providing new interpretations for many others. His book, An Outline of the Grammar of the Safaitic Inscriptions; Leiden, 2015) has been an invaluable and constant resource in the editing of these texts.
After the tragically early death of Geraldine King in 2009, Professor Jeremy Johns suggested to Michael Macdonald the idea of creating a website on which her work could be published, since much of it was almost complete when she died. This led to the creation in 2011 of the Ancient Arabia: Languages and Cultures (AALC) website (http://www.ancientarabia.co.uk/) which was based at the Khalili Research Centre (KRC) of which Jeremy Johns is the director. AALC was set up by Daniel Burt, the KRC’s IT specialist, and was funded by a grant from the University of Oxford’s John Fell Research Fund.

At the same time, Jeremy Johns and Michael Macdonald started planning to create OCIANA based on the Safaitic Database which Michael Macdonald had started in 1994 and which by this time included some 15,000 Safaitic inscriptions. With a generous grant from the United Kingdom’s Arts and Humanities Research Council and again based at the Khalili Research Centre, the project started to create a new database which aimed to include all the known inscriptions from ancient North Arabia in the broadest sense. In this, it was complementary to the Digital Archive for the Study of Pre-Islamic Inscriptions (DASI), based at Pisa, which was creating a corpus of the Ancient South Arabian inscriptions. In Phase 1 of OCIANA, in 2012, the website (http://krc.orient.ox.ac.uk/ociana) was created together with an initial database containing the 3372 Safaitic inscriptions recorded by Geraldine King in 1989 on the Basalt Desert Rescue Survey (BDRS).

OCIANA Phase 2 was a three-and-a-half year project, which ran from September 2013 to March 2017 and was funded by the United Kingdom’s Arts and Humanities Research Council, to whom we are extremely grateful. The OCIANA Phase 2 team consisted of:

- Dr Ali Al-Manaser, who was in charge of discovering and entering collections of Safaitic inscriptions, by far the largest corpus of Ancient North Arabian inscriptions, as well as portions of the Hismaic corpus;
- Dr María del Carmen Hildago-Chacón Diez, who was in charge of entering the Dadanitic, Taymanitic, Dispersed Oasis Ancient North Arabian, Hasaitic, and Hismaic inscriptions;
- Daniel Burt, as IT expert and developer of the OCIANA database;
- Jennifer Brooke Lockie, who was in charge of scanning of over 100,000 black-and-white negatives, prints and colour slides so that these could be entered into the database;
- Michael Macdonald was the academic director and
- Professor Jeremy Johns was the Administrative director.

Daniel Burt created a new database into which were transferred the approximately 15,000 Safaitic inscriptions from Michael Macdonald’s Safaitic Database and Geraldine King’s BDRS texts. These were all checked and tagged, commentaries and apparatus criticus, and bibliography were added, as well as all available information about the provenance of the texts. Whenever possible, photographs or images of hand copies were entered for each inscription. Many thousands of published and previously unpublished inscriptions were added, so that after three and a half years the number of inscriptions in OCIANA has risen to over 40,000. The tagging functionality built into the OCIANA database has allowed the project team to generate comprehensive word lists, onomastical indices, and concordances of genealogies, as well as to output the inscriptions as web pages, digital publications such as this one, and XML and JSON files for use by future scholars in the field.

To take just one example of how we hope that OCIANA has made the Ancient North Arabian inscriptions more accessible to epigraphists, scholars in other fields, and the general public. Part 5 of the Corpus Inscriptionum Semiticarum published in 1950–1951, collected almost all the Safaitic inscriptions known at the time (some 5380). They are transliterated in an adaptation of the Hebrew script, and the translations and commentary are in Latin, with a rather complicated process needed to access the hand copies on which the readings were based. In OCIANA, all these inscriptions are available, transliterated into the roman script and formalized Safaitic glyphs, with translation, apparatus criticus, commentary and all other information in English, and with the image of the inscription on the same page. In addition, thanks to the Safaitic Epigraphic Survey Programme (1995–2003), which searched for the sites where the Corpus inscriptions had been found and photographed them, OCIANA can, for the first time, provide photographs of many of the inscriptions which up till now were known only from hand copies of variable accuracy. Similarly, OCIANA

---

18 The only major collection it did not include, were the majority of the inscriptions in Littmann 1943.
provides photographs of Dadanitic, Taymanitic and Hismaic inscriptions, which were previously known only from hand copies.

The one group of Ancient North Arabian inscriptions not included in Phase 2 of OCIANA was the Thamudic B, C, and D and Southern Thamudic (or "Himaitic", as they are now called). These will be added in Phase 3 of the project, which will be based at the University of Leiden, The Netherlands, under the joint academic direction of Dr Ahmad Al-Jallad and Michael Macdonald.

It should be noted that we have called this the "Preliminary Edition" because we are aware that it is far from perfect. There are some collections of inscriptions which are the subject of ongoing PhD dissertations, which will need to be added in Phase 3, once the dissertations have been submitted. There will also, inevitably, be cases in such a huge collection, where some inscriptions may inadvertently have been omitted, and there will certainly be some texts where the readings, translations, or information about an inscription can be improved. This, plus the fact that English was not the mother-tongue of all the researchers working on OCIANA, may mean that occasionally there will be mistakes or infelicities in the translations, commentaries, etc. We hope the user will forgive these and bring them to our attention (ociana@orinst.ox.ac.uk) so that we can correct them. Once we have been able to take account of all these factors, we hope to publish a corrected First Edition during Phase 3.

19See Robin & Gorea 2016.
General Notes

1. As mentioned above, one of the principles on which OCIANA was founded was that it should convert collections of inscriptions which had been published in numerous different languages, into a single, coherent corpus presented in a single format and a single international language, English. Thus, all quotations in languages other than English have been translated into English and the transliterations of Ancient North Arabian or Arabic words have been converted to the systems used in OCIANA (see below).

2. When an inscription number was originally published as, for instance WH 1725a, it has been converted to WH 1725.1.

3. The term "ed. pr." (editio princeps) in the "Origin of reading" and/or "Origin of translation" refers to the work indicated by the siglum.

4. If two or more numbers from the same work, e.g. "C 257, C 1365" appear in the Siglum field, this means that two parts of the same inscription were published as two or more texts in the edition.

5. If one number in an edition occurs in the Siglum field and another from the same edition in brackets after it, for instance, “LP 285 (LP 1096)”, this means that the same inscription was published twice, under two different numbers, in the original edition.

6. If we have not been able to interpret a sequence of letters in the original, they are placed in italics at the appropriate point in the Translation.

7. Those who wish to cite readings etc. in OCIANA can either do so as "OCIANA Safaitic" + the siglum and the date the pdf or database was consulted, or by citing the link which will be found at the end of each inscription + the date it was consulted.

Michael C. A. Macdonald
March 2017
Introduction

Editorial apparatus used in the OCIANA edition of all inscriptions:

{} In the Transliteration field: Each letter the reading of which is uncertain is enclosed between {}, if a succession of letters in the same name or word is doubtful, each is placed between {}.

() In the Transliteration field: When an inscription is known only from a hand-copy, editorial corrections of the copy are placed between (). If a succession of letters in the same name or word has been corrected, each is placed between ( ).

() Round brackets with nothing between them (not even a space) signal editorial excision of a sign in the copy.

[] Restored letters are placed between [ ]. These brackets are used by the editor:
1. if he/she thinks the copyist has missed a letter;
2. if he/she thinks the author of the inscription has missed a letter;
3. if a letter has been destroyed on the stone but can be restored from the context.
If a succession of letters in the same name or word has been restored, each is placed between [ ].

[] Brackets with nothing between them (not even a space) signal that the editor believes a letter has been omitted but will not speculate as to what that letter was.
Note that if a letter in the Transliteration field is enclosed in any of these brackets, the translation of the entire name or word in which it occurs is enclosed in {}.

<> Signal editorial corrections of the original text. If the editor believes that the author of the inscription wrote an incorrect letter, he will place the corrected letter he proposes between < >. Example: $rd$b$w$ in the Transliteration field would mean that a letter other than $b$ appeared at this point in the original text and has been corrected to $b$ by the editor.

<>> Signal editorial excision of a redundant letter in the original text (e.g. $mdgbr$ would appear as $md<>>br$).

[[ ]] For corrections or erasures by the author.
Corrections: When the author of an inscription carved an incorrect sign or signs and then transformed it/them into the correct one(s), the transliteration of each corrected sign is placed between [[ ]] in the Transliteration field.
Erasures: If the author of an inscription carved an incorrect sign or signs and then erased it/them, “[[ ]]” (with no space between them) is placed in the Transliteration field at the point where each erased letter or letters occurs.

{"} If a letter has been altered (e.g. by vandalism) so as to obscure the sense of the text or to produce nonsense, the transliteration of the original letter (if ascertainable) is placed between { } in the Transliteration Field and a note made in the Commentary. If the original letter has been rendered unrecognizable, { } with no space between them is placed in the Transliteration Field.

---- A series of four hyphens is used to signal one or more unreadable letters in the inscription, or areas where the text has been broken off.

[..] Signals that the original text is incomplete at this point, for whatever reason.

(--..) Signals that on the copy the text appears to be incomplete at this point.

(--.--..) Signals that an apparent gap in the copy is followed by one or more unreadable letters.
When a passage in the original cannot be translated, the transliteration of the passage is placed in italics at the appropriate point in the Translation.
Distinguishing words with identical spellings

Because of the search requirements in the database, enclitic particles and pronouns appear in the Transliteration field with a hyphen and a space. Thus, b-ḥ-ḍr (“in this place”), ʾb-ḥ (“his father”).

In order to distinguish words which have an identical spelling in these inscriptions, the following conventions have been adopted in the Transliteration.

ʾ- the definite article which sometimes occurs instead of ḫ-/ḥn- (see Al-Jalla 2015: 16–17)
ʾl the noun "lineage"
ʾl- the preposition (compare Arabic ilā)
b the Taymanitic for "son (of)"
b- the preposition "with", "in", etc.
bn "son of"
bn- the preposition (compare Arabic bayna)
bn represents the personal name Bn in the Transliteration field (to distinguish it from bn ="son of"). However, it will appear as Bn (that is without the dot) in the Translation field
bt "daughter of " in Taymanitic and occasionally in Safaitic and Hismaic.
bt represents the personal name Bt in the Transliteration field (to distinguish it from bt ="daughter of"). However, it will appear as Bt (that is without the dot) in the Translation field
bt the noun "house, tent"
ʾd the relative pronoun
ʾd- the relative pronoun in ʾd-ʾl only
ʾl the noun "colt, young male horse"
ʾl- the preposition (compare Arabic ʾolā)
ʾm the nouns "grandfather", "year", or "people"
ʾm- the preposition "with"
ʾn the nouns "help", "a spring"
ʾn- the preposition
f the conjunction
f- the preposition "in" (compare Arabic fī)
k the preposition “like”
-k the 2nd person singular enclitic pronoun
l the ʾlām auctoris introducing a text
l- the preposition
m the relative pronoun (= *man with assimilation of the [n])
m- the preposition (= *min with assimilation of the [n])
mn the relative pronoun
| **mn-** | the preposition |
| **-n**  | the 1st person singular or plural enclitic pronoun on verbs and the 1st person plural enclitic pronoun on nouns |
| **h**   | the vocative particle |
| **h-**  | the definite article |
| **-h**  | the 3rd person singular enclitic pronoun |
| **-hm** | the 3rd person plural enclitic pronoun |

---

Since no fixed alphabetic orders are known for any of the Ancient North Arabian scripts, we have used the orders of the Roman and Arabic alphabets.

The structure of inscription records in the Corpus

Individual inscription records within the corpus are listed here with all of the information that is contained within the database with regards to their content and provenance, alongside any *apparatus criticus* or commentary notes that may relate to them. Each individual record also contains a hyperlink to the webpage for that inscription, which will contain any photographs or tracings that the database holds for them.

Each inscription record is structured as follows:

1. Main identifying Siglum, followed by any alternative Sigla (in brackets)
2. Transliterated text of the inscription
3. Translation of the inscription
4. Apparatus Criticus
5. Commentary
6. Provenance
   The site, region, and country from which the inscription originates
   [Decimal Latitude and Longitude co-ordinates of the inscription’s location]
7. References
8. URL
   A hyperlink to the webpage for this record from the OCIANA database

It is important to note that, where the database does not contain relevant information or content, that section will not be shown. So, for example, not every entry will include a section for Apparatus Criticus, Latitudinal and Longitudinal co-ordinates, and so on.

In order to keep the pdf versions of the Corpus to a manageable size, images of the inscriptions have not been included alongside the records, but the URL for each inscription record will link the user to a webpage that includes all of the images OCIANA has for each inscription.

Please note that, due to the size of the Corpus of Safaitic Inscriptions, it has not been possible for us to typeset this pdf to the same degree as the other corpora in the OCIANA series, so some inscription entries may break awkwardly across pages. We ask the reader to excuse us for this, but hope that they will understand our predicament and that they will find this pdf useful nevertheless.

AbaNS 107

\( l\, \text{m’tm}\, \text{bn}\, \text{’m w grz my w(z)r f h rdy h(z)]lm…--t} \)

By M’tm son of ’m w grzmy w[za]r f h rdy h(z)]lm…--t

**Apparatus Criticus:**
AbaNS 107: w grzm yrz f h rdy s[za]lm [th and he cut (something) off from Yrz. O rdy [grant] peace [th

**Provenance:**
Cairn 39, unspecified region, unspecified country.  
[Latitude/Longitude: 32.397672 / 37.858062]  
Wadi al-Ghuṣein

**References:**

**URL:** [http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024867.html](http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024867.html)

AbaNS 108

\( l\, \text{’mr}\, \text{bn}\, \text{’bdy h-bkrt} \)

By ’mr son of ’bdy is the young she-camel

**Commentary:**
Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghuṣein

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024868.html

AbaNS 109

{l g rt bn htm h- bkrt}

By Grt son of Ḥtm is the young she-camel

Commentary:

Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghuṣein

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024869.html

AbaNS 110

{l h[g]l bn "s²d h- fr(s¹)}

By (Hgl) son of "s²d is the (horse)

Apparatus Criticus:
AbaNS 110: h- żb’ this hyena

Commentary:
The first letter of the substantive could be a f and the second letter is most likely a r. The last letter is a circle. The drawing is not particularly horse-like but the editor’s interpretation seems unlikely.

Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghuṣein

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024870.html

AbaNS 111

{l y’l bn ‘bs²n}

By Y’l son of ‘bs²n

Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghušein

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024871.html

---

AbaNS 112

lʾbs²n h- bkrt

By ʾbs²n is the young she-camel

Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghušein

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0024872.html

---

AbaNS 112.1

lʾmrʾl bnʾmr

By ʾmrʾl son of ʾmr

Provenance:
Cairn 39, unspecified region, unspecified country.
[Latitude/Longitude: 32.397672 / 37.858062]
Wadi al-Ghušein

References:

**AbaNS 166**

1 ng(fr) bn mḥbb

By (Ndr) son of Mḥbb

**Apparatus Criticus:**
AbaNS 166: l ndr bn mḥbb l h-frs¹
Commentary:
The fourth letter might be a b. The last 5 letters are written on the other side of the drawing and it is uncertain how they are to be read. The editor does not explain the second l although it is possible that the last part of the text should be read l-ḥḥrṣ¹ to him belongs a horse. There is usually a connective however introducing this type of phrase.

Provenance:
Site 6, unspecified region, unspecified country.
[Latitude/Longitude: 32.175375 / 37.233277]
al-Fahda

AbaNS 356

l rkb bn nzmt bn s²kr h- {ktrt}

By Rkb son of Nzmt son of S²kr is the camel’s hump

Apparatus Criticus:

AbaNS 356: h- bkrt "he draws a bull-camel but he writes she-camel"

Commentary:

The fourth letter from the end definitely has a slight tail in the copy and if it is accurate it should almost certainly be read as a k or possibly as s¹. The editor reads the letter as b and comments on the fact that although the drawing is probably intended to be a male animal it is described as a female one. Hava: kitr "high camel's hump"; katrah "camel's hump"; See also Kazimirski .

Provenance:

Site 12, unspecified region, unspecified country.

*l ṣwd bn y‘mr bn mlk bn ws¹mt*

By *ṣwd* son of *Y‘mr* son of *Mlk* son of *Ws¹mt*
By ʿwd son of Yʿmr son of Mk son of Ws¹mt

Apparatus Criticus:
AbaNS 362: gwd for ‘wd

Commentary:
There is a cartouche surrounding the inscription. The second letter is two concentric circles and it is uncertain how it should be read. The reading as ʿ is doubtful as the other ʿ in the text is a single circle. There is no evidence that two concentric circles should be read as a g as in the edition. It is possible it should be read as a d however the name dwd is not attested in Hn.

AbaNS 1076

l ḏ bn ḏḥt bn ṣlh bn (q)lmṭ fm bny ṭrd bmr’d

By ḏḥ son of ḏḥt son of ṣlh son of (Qlmṭ) fmbnytrdbmr’d

Apparatus Criticus:
AbaNS 1076: l ḏ bn ḏḥt (b){n} fm bny ṭrd b(n) mr’d bn ṣlh bn qlmt

Commentary:
It is difficult to know how to read the inscription. The letters bn ṣlh bn (q)lmṭ are written at right angles to the rest of the text and it seems likely that it is part of the genealogy which was added later. The letters fmbnytrdbmr’d are more likely to be a statement rather than part of the genealogy.

AbGQ 1 (HYGQ 6)

Commentary:
From the published photograph it is possible the last letter is d. The copy has been printed with the positions of AbGQ 1 and AbGQ 2 on the rock reversed.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010501.html
AbGQ 1 (HYGQ 65)

l m(d)ḥ bn s¹k

(By) (Mdḥ) son of S¹k

Apparatus Criticus:
AbGQ: l mdḥ bn s¹k

Commentary:
The reading is from the copy as the photocopy of the photograph is illegible. The backward hook of the l seems unlikely and the d is very small compared to the other letters of the text.

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010668.html

AbGQ 2 (HYGQ 5)

l mqmʾl bn ghš² w rʿy h- nḥl mʿ h- s¹byt

By Mqmʾl son of Gḥš² and he pastured the valley with ḥ S¹byt

Apparatus Criticus:
AbGQ: l mqmʾl bn ghf w rʿy b nḥl mʿ s¹byt; translated from w rʿy as "He pastured with looted animal in the valley".

Commentary:
MCAM: It is clear that the second name is Gḥš²; and AbGQ has not translated w has read b nḥl instead of ḥ nḥl and has omitted the ḥ before s¹byt in both the transliteration and translation. From the copy the r of rʿy is a line with a hook. The copy has been printed so that the positions of AbGQ 1 and AbGQ 2 on the rock are reversed

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010502.html

AbGQ 2 (HYGQ 72)

l fḥ(r)n bn kḥln

By (Fḥrn) son of Kḥln

Apparatus Criticus:
AbGQ: fḥrn for fḥ(r)n.

Commentary:
The reading is from the copy as the photocopy of the photograph is illegible. The fourth letter is uncertain as in the copy the letter has only one arm which would be unusual for a r.
Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010670.html

AbGQ 3 (HYGQ 80)

\( l \) mqm bn zbd w ḥrs¹
By Mqm son of Zbd w ḥrs¹

Commentary:
From the photograph it looks as though the inscription is probably written down the rock and then curving even though both the copy and photograph have been printed so that the beginning of the inscription reads horizontally. The copy has been printed the other way up to the photograph.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010503.html

AbGQ 3 (HYGQ 8)

\( l \) n()frt bn ṭlm bn ḥbʾl bn qn
By Nfrt son of Ṭlm son of Ḥbʾl son of Qn

Commentary:
The reading is from the copy as the photocopy of the photograph is illegible. There is a dot in the copy after the first n and the commentary mentions there is a hole in the rock which resembles an ʿ. The second third and fourth b’s are written at 90° as are the n’s of the second and third bn’s which are inscribed horizontally above the b rather than vertically to one side.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010503.html

AbGQ 4 (HYGQ 99)

\( l \) msk bn n’m bn ṭ r ʿ ( ʾ ) l qs²m w mty f h- s²ḥqm ġmnt
By Ms¹ k son of n’m son of ṭ of the lineage of Qs²m w mty and so O S²ḥqm [grant] booty

Apparatus Criticus:
AbGQ: ʾb? for ʿr; d l for d (ʾ); translated from w mty as “He made a hasty journey O s²ḥqm [grant] booty.
Commentary:
MCAM: The copy has ḏll and not ḏ ‘l as in AbGQ which is presumably a miscopying for ḏ ‘l. The copy makes the f identical with the following s². AbGQ does not translate w.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010504.html

AbGQ 4 (HYGQ 67)

l ḏmn bn ḥzm

By ḏ(mn) son of ḥzm

Apparatus Criticus:
AKS: tml or possibly tmn for ḥmn.

Commentary:
The reading is from the copy as the photocopy of the photograph is illegible. The first letter is rather short for a l. It seems most likely that the last letter of the first name should be read as a n. The second letter might be t as read in the edition.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010672.html

AbGQ 5

l ḏll [b][n] ḥll bn ṣg

{By} ḥll (son of) ḥll son of ṣg

Apparatus Criticus:
AbGQ: l ḏll [b][n] ḥll bn ṣm.

Commentary:
MCAM: The copy is very bad and nothing can be relied upon. On the basis of the copy the last letter is more likely to be a g than a m.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010505.html
AbGQ 5 (HYGQ 73)

ʾẓmy bn ʿb

By ʾẓmy son of ʿb

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible.

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010673.html

AbGQ 6.1 (HYGQ 74)

l bn ḥ{r}qm bn krzn bn dhrt bn yṭn bn gr bn nmm bn m{ṣ}t

By Bny son of {Ḥrqm} son of Krzn son of Dhrt son of Yṭn son of Gr son of Nmm son of {Mṣt}

Apparatus Criticus:
AbGQ: ḥrqm for ḥ{r}qm; m{ṣ}ḥ or as suggested in the commentary possibly mʿt for m{ṣ}t.

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. It is possible the second letter of the second name should be read as ḷ. The first letter of the sixth name might be an ‘ rather than a g. The penultimate letter has the form of an ’ with a detached horizontal line above one of the forks. The final letter as it appears in the copy is more likely to be a t rather than a ḫ.

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010674.html

AbGQ 6.2

l {ḥ}ṭy

By {Ḥy}

Apparatus Criticus:
AKS: the letters l{ḥ}{ṭy} are read in the commentary.

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. The letters are next to to the first name of AbGQ 6.1 and it is possible the copy is inaccurate or incomplete.

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:
[AbGQ] ʿAbbādī [Abbadi], Š. Kitābāt ṣafawiya min ḡabal qurma. Dirāsāt al-ʿulām al-insāniyyah wa-ʾl-
AbGQ 7 (HYGQ 75)

l hysʾr bn fʾ

By Hysʾr son of Fʾ

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. The stroke of the second letter has a short horizontal line across the top which is unusual.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010675.html

AbGQ 9.1 (HYGQ 78)

l sʾry bn sʾḥbn

By Sʾry son of Sʾḥbn

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. The beginning of this text and AbGQ 10 are partly enclosed by a line with arms at either end.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010677.html
AbGQ 9.2 (HYGQ 77)

l ʾḥbr(r) {---}ʾ"

By {ḥbr---}ʾ"

Apparatus Criticus:
AKS: ṣḥ written in large letters and then g or ʿbb written in comparatively small letters.

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible and it is difficult to know how the letters should be read. The fourth letter is squared which resembles the form of the r in the other texts on the stone although it is possible it could be a b. The ʾ and last letter which might be a g rather than an ʾ are written below and it seems likely that some letters are missing from the copy between them and the preceding r.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:
URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010679.html

AbGQ 10 (HYGQ 79)

l ḏbn bn ʿbdy

By ḏbn son of ʿbdy

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. It is equally possible the letters should be divided to read ḏ bn bnʿbdy.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:
URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010680.html

AbGQ 11 (HYGQ 62)

l ṭgdr h- bkt

By ṭgdr is the young she-camel

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible.

Provenance:
Jabal Qurma, unspecified region, unspecified country.
Jabal Qurma

References:
AbGQ 12 (HYGQ 63)

l brk bn r(m)d

By Brk son of {Rm }d

Apparatus Criticus:
AKS: rmd for r(m)d.

Commentary:
The reading is from the copy alone as the photocopy of the photograph is illegible. The m is a rather unusual shape being joined at one end and not at the other. The text is surrounded by a cartouche.

Provenance:
Jabal Qurma, unspecified region, unspecified country.

References:

URL: http://krc.orient.ox.ac.uk/ociana/corpus/pages/OCIANA_0010681.html

AbMNS 1

l ṣ'n bn kḥs'mn bn ḏnn w ṣgm 'l- nṣr'l

By ṣ'n son of Kḥs'mn son of ḏnn and he grieved for Nṣr'l

Provenance:
AbMNS 2

l ḡrmal bn ḡrb bn ḡrmal bn ḡtsalt bn ḡz sl dh ḡz sl hbd f ḡzd slm w ḡld ḡms y sl ḡz ḡbd slmn ḡld sl ḡnt w ḡlt nqʿt ḡbl ḡld

By Grml son of ḡrb son of Grml son of ḡtsalt son of Wsm of the lineage of Zmr and he controlled the area alone so, O Gdfl [grant] security and he helped the goats give birth the year that Fls·mn withheld it [the rain] from the Province [or region] and O Lt [inflict] nqʿt on him who destroys [the inscription].

Apparatus Criticus:
AbMNS 2: translation: wa ʾkṭr aš-ṣyḥ fāyā ḡd ḡdf [innmah] as·s·s·lām wā-wāld ḡl-ʾmʿzah fl as·s·s·lām wā-ṣ·mʾyān [al-ʾāmṯār]ʿala al-mādyynah

Commentary:
The root ḡmr is common Semitic, but its sense varies from language to language. In Akkadian, it means "to see," in Hebrew "to speak," and in Arabic, most commonly "to command". The Lisān, however, records an interesting marginal usage, with the intransitive pattern fāʿila, attributed to the ʿarab": 'amira banū ḡl. ḡy ḡūṭrū Ṭhe Banū ḡūṭrū increased in number, became abundant'. The preformative t- in the Safaitic verb indicates that it too is intransitive, suggesting a connection between the two. Thus, we translate tʿmr as "become abundant or widespread", like HaNSB, but ḡ- s·b·ḥ as "want of milk" with the generic article.

Provenance:
Wādī Salmā, unspecified region, Jordan

*l ghm bn 's¹ bn ghm bn m(lj)(k) d- l s¹b [wj ḏkr gs²-h w ḥyḏ wdw s¹d 'ḥ -h f b(j[s²]) m zll f h lt s¹k- - m s²rd*

By Ghm son of 's¹ son of Ghm son of (Mlk) of the lineage of S²b and he remembered his raiding party and he placed 'wd and S¹d his brother(s) on a funerary cairn and so despair for those who remain and so O Lt s¹k-- -who runs away

**Commentary:**
We have followed Al-Jallad (2015: 298) in the translation of ḥyḏ, and 2015: 221 for that of b’s¹ m zll. Note the Ancient South Arabian, rather than Safaitic, form of the letter ẓ. It is not clear how the author was aware of it or why he used it here. It would seem that ḥ-h refers only to S¹d, since if it were in the dual it would be ḥw-h (Al-Jallad 2015: 63–64). For the meaning of s²rd compare Arabic ṣarrada “he departed, driven away” (Lane 1531b).

AZNG 1

lḥlst bn m’n ǧ-‘l s¹ʿd w mrd ṭlt s’nn mn qbl nfs¹ zlm f h lt w ds²r s¹lm l-ḍ ǧnz zlm

By Ḥlst son of M’n of the lineage of S¹ʿd and Nepos who was oppressive faced a rebellion for three years so O Lt and Dṣ²r keep him safe who was distressed by oppression

Apparatus Criticus:
AZNG: mrd ṭlt s’nn mn qbl nfs¹ zlm f h lt w ds²r s¹lm l-ḍ ǧnz zlm "he rebelled three years against Nepos who is a tyrant so O Lt and Dṣ²r [grant] security to whom who escaped tyranny"

Commentary:
The translation here is that of Al-Jallad 2015: 152, 166–167, 222. However, it should be noted that a statement referring to something which does not explicitly involve the author ("and Nepos who was oppressive faced a rebellion for three years") is extremely rare in the Safaitic inscriptions.

Provenance:
Unspecified site, unspecified region, Jordan
[Latitude/Longitude: 32.512002 / 37.308402]
"At the end of Wadi al-Ḥashād, 45 km North-East of aṣ-Ṣafāwī ... near the northeastern border of Jordan" (AZNG p. 155).

l bdʾl bnt {ʾ}ml bn sʾlm bn ṣʾmy bn hʾbʾl bn ḫlhm h- bkrt

By Bdʾl daughter of {ʾ}ml son of Sʾlm son of ṣʾmy son of ḫlhm is the young female camel

Apparatus Criticus:
Graf: l bdʾl bn ḫsʾmn bn sʾlm bn ṣʾmy bn hʾbʾl bn ḫsʾm h- bkrt

Commentary:
The inscription was found on a basalt block built into a "modern wall which had been built across the front of the cave" at the Byzantine church on Jabal Lu Weibdeh Amman see BCDF p.406-407. Only a copy of the inscription has been published and it is difficult to see how Graf arrived at his reading if it is based on this copy. It seems likely that his reading was made from a photograph or the original and that the published copy was not checked by him. The above SD reading which is made on the basis of the copy should therefore be treated with caution.

Provenance:
Byzantine church on Jabal al-Luwaybidah, unspecified region, unspecified country.

Ammon

BRevn.A 1

l q′sn bn s¹{l}ly bn q′sn bn ḥlṣ bn nhb ṣ- l dʾf w ngy n[f] fr s¹nt btl ḥg s¹1²

By Q′sn son of (S¹{l}y) son of Q′sn son of ēlṣ son of Nhḥ of the lineage of Dʾf and he escaped (by fleeing) the year the pilgrimage to S¹³ had no effect

Commentary:
In broadly incised letters, boustrophedon. Note the form of f; which is typical of several texts by members of the 'l dʾf (see Macdonald, Muazzin and Nehmē 1996: 463 and n. 77). One or more letters have been hammered over between ngy and nfr. The b of btl is very straight. The implication of btl ḥg s¹1² is that the pilgrimage to the shrine of Blʿs mn at S¹³ did not produce rain.

Provenance:
Site 14.1, Unnamed, Al-Suwaydah, Syria
On the left bank of Wādī Shām, north-west of the water-tower at Biʾr al-Ruṣayʿi. A small outcrop overlooking the wadi, 30 m east of site 14, on the opposite side of a small gully. This is site E in Macdonald, Al Muʿazzin & Nehmē 1996.

**BRenv.B 5**

[----] bn kn bn nmn ʿl mʾṣ[r]  
----- son of Kn son of Nmn of the lineage of {Mʾṣr}

**Commentary:**  
BRenv.B 5, 6 and 7 are on the same flat face of a block of basalt. It was split into several pieces, of which six survive, after BR 5 was inscribed (since the beginning of the text is missing and parts of the same letters are on different sections) but before 7 was written (since it is neatly confined to one section). The side of the block adjacent to the beginning of what remains of 5 is weathered smooth and is patinated to black, which suggests that the break must have taken place a long time ago. It is difficult to know whether 6 was written before or after the block was broken up. There is space for an ʿ between the seventh and eight surviving letters and it could have been lost when the rock was broken, but there is no trace of it, and nmn is said to be attested in ISB 383 (known only from a copy) and Damascus 2786 (old 5537) where nm is clear on the photograph but anything after the m is invisible. The final letter is a much tighter curve than the bʾs of the bn and may be a ṣ.

**Provenance:**  
Unnamed, Al-Suwaydah, Syria  
On the left bank of Wādī Shām, north-west of the water-tower at Biʿr al-Ruṣayʿī. A small outcrop approximately 150 m north of the wadi. This is site E1 in Macdonald, Al Muʿazzin & Nehmē 1996.

By 'bd son of Mlt son of S¹ son of 'bd and he washed in a valley (?) and B¹'smn [infect] blindness on whoever scratches out the (inscription) and (he came to water) at (al-Namârah) in (Capricorn) in the year the (Hwlt) killed (m) and so O Lt [grant] revenge

**Commentary:**
Photographed in 1996, near Biʾr al-Ruṣayy, the exact site is not certain, and the inscription number given to it is purely arbitrary. Arabic rahada can mean "to wash (something, with the accusative)" or "to sweat". Perhaps here it has a reflexive meaning equivalent to Arabic tarakhada, or is in the passive, that is "he was washed (by the rain). See Musil 1928: 14-15 on bathing and washing after the first rains. The word 'rd could have numerous different meanings many of which could be appropriate here, though in most cases one would expect the word to be defined. The s¹ of s¹fr has been damaged by an abrasion. The loop of the d of wrd is very slim and the top of the stem is extended by two lighter lines which could conceivably be the loop of a y or the prong of a h. Arabic wry can mean "to be kindled (of fire)" and nawra can mean "a brand mark made with a hot iron". Alternatively, Arabic wrr can mean to be heavy with rain (of clouds), but nrr has no meaning suitable for such a context. Since it is difficult to get an exact statement from the text on the basis of such meanings, the reading wr(d) seems the most likely possibility. The author may have written h- nrt for h- nmr. As Al-Jallad has shown, yʾmr was the Safaitic name for the Zodiac sign of Capricorn and occurs in C 4276 in the phrase b- rʾyʾyʾmr "during the rising of Capricorn" (see Al-Jallad 2016: 92–93, 103–104). The h of hwlt has four prongs. Only one letter seems to be missing following hwlt and the traces suggest that it was a '.

C 2 (Wetzstein 1; Wetzstein 1860: 61; HrH 1)

l Ḳḥ bn qmm

By Ḳḥ son of Qmm

Apparatus Criticus:
C: qmrn for qmm.

Commentary:
This is the large inscribed lintel recorded by Wetzstein (HrH 1 = C 2) which is still at the site. It is 1.54 x 62 cm, and 23 cm thick. The inscription (C 2) is written from left to right in large letters (from 4.2 to 9 cm high) with a serpentine line above it. The second stone with the drawing of a man which Wetzstein found beside it (see C 2), is no longer visible, but may be among the rubble. There is a second large block bearing a few very faint letters (HrH 2).

Provenance:
North-western edge of the Ṣafā, Rif Dimashq, Syria
A ruined building on the eastern edge of a small ḱabre surrounded by low cliffs (c. 5 m high), except on the north side which is open. Many large roughly dressed ashlar blocks. The building must have been quite substantial, possibly with ceilings supported by a central pillar as at Khirbat ‘Ar’ar. It was first discovered in 1858 by Wetzstein, who gives a poetic description of it, as well as rough measurements (1860: 61–62). It appears to have been in ruins even in his day. Note, this is not Ḥaġar al-Helle (the reported provenance of C 633-861), which has yet to be located.

C 5 (Dunand 1343 a)

I s’d bn nṣr bn ḥns’r w nṣr

By S’d d son of Nṣr son of Ḥns’r and he was on the look-out

Apparatus Criticus:
C: h’d for S’d

Provenance:
Gabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Gabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from “the region between Gabal Says and Zalaf.”

Gabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Gabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bi) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Gabal Says and Zalaf."

Provenance:
Gabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Gabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an
Umayyad palace and a semi-permanent lake. De Vogué (1868–1877: 142–143) found only 2 Safaitic texts (C
3, 3bis) and some Kufic inscriptions by the ruind and Dusaud and Macler found none. None of these seems to
have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large
numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C
5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic
inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly
numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and
unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C
292–321) said in C to have come from “the region between Gabal Says and Zalaf.”

C 53 (Dunand 1362 b)

lḥrb bn Enums

By Ḥrḫ son of Enums

Provenance:
Jabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Jabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Jabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from “the region between Jabal Says and Zalaf.”

Gabal Says, Rif Dimashq, Syria

[Latitude/Longitude: 33.311133 / 37.354389]

Gabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Gabal Says and Zalaf."

Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–291) said in C to have come from “the region between Gabal Says and Zalaf.”

Provenance:
Gabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]

Gabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. C 97, 96 (Dunand 1383 e; Dunand 1383 d)

l nmr bn s¹d bn s¹b’t bn hyn bn (ʼ)hwf [[[ ][ ]][] ][ ] bn flt bn s¹d bn bwk bn rs¹ bn ʼwf bn whb’l w wgm l’exbb w l’hbb w l’hbb w hbb w hbb w hbb w hbg l’ h’ky f’s²rq b h’b’l w ts’w’q f’h l’t s¹l’m w h’l’t s¹s¹ nq’t l’ g’ y’wr h’s²fr

By Nmr son of S¹d son of S¹b’t son of Hyn son of (ʼhwf) [[[ ][ ]][ ]][ ][ ] son of Flt son of S¹d son of Bwk son of rs¹ son of Whb’l and he grieved for [one] friend and for [another] friend, and for [another] friend, and [another] friend, and [another] friend, and they succumbed to a strong fever; then he migrated to the inner desert with the camels and felt much longing, so, O Lt, may he be secure, and O goddess of s¹s¹, may he who would efface this inscription be thrown out of his grave.

Apparatus Criticus:
C read this as two separate inscriptions (C 96 and 97):

TEXT
C 96: And greetings for Ḥhb and for Ḥbb and for Ḥḥbb’

C 97: ‘and he pastured the sheep. And he migrated towards the east with the camels. And he was filled with longing. And, O Lt safety. And, O ‘lt, punish him who may destroy the inscription’

**Commentary:**

Dunand’s copy, from which C was working, does not show accurately the relative positions of the inscriptions on this rock and so there was no way that the editor of C could have realised that C 97 and 96 were one text. However, on Robert Hoyland’s photograph, shown here, it is clear that 96 is the continuation of 97 and that here has been an attempt to erase the words bn ‘m between (‘)hwf and bn fl. Parts of this genealogy can be found in a number of other inscriptions (C 97+96, 1534, 2025, 2732, 2779, 2787, 4959, LP 697, 713, 1156, KRS 201, 260) and it is clear from all these that the pivotal point in this lineage is formed by bwk bn ‘rs’. All the genealogies go back to this point and only one (SSWS 200) takes it further back, to ‘wdf bn gn’t bn ‘ly. This shows that the lineage is part of the ‘l ‘wdr, one of the two large genealogies known from the Safaitic inscriptions, both of which take their genealogy back to wbh’t. It is particularly interesting that C 97+96 telescopes the generations between the pivotal point and the ultimate ‘ancestor’ by ending the genealogy with bwk bn ‘rs’ bn ‘wdf bn wbh’t (cf. KRS 260 where the author ends his genealogy with bwk bn ‘rs’ bn wbh’t). It is also interesting the author of C 97+96 appears to have carved bn ‘m in the wrong place. He placed it after ‘hwf whereas C 2025 would suggest that its correct position was before ‘hwf. It is therefore possible that the author himself erased it. One final note on the genealogy: the names ‘s’d and ‘s’d, and flt and flt occur consistently in different strands of the genealogy, and it is clear that the shorter forms are not errors for the longer ones. For the translation of wdrg l. h. hly see Al-Jallad 2015: 228, 302, 310, which was written before the study of the photograph showed that C 97 and 96 were one inscription. ‘lt ‘s’š is the tutelary goddess of Uṣays, the ancient and medieval name of Ġabal Says where this inscription was found. The place name ‘s’š recurs in C 22 and the deity ‘lt ‘s’š in C 101. See MISS 466-467, and 474-475 on these tutelary deities of places.

C 99 consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüë (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dusaud and Macler found none. None of these seems to have climbed to the top of the inner crater. Von Oppenheim (1899–1900: i, 245), however, reported large numbers on the south-east slope of the inner crater and particularly on its summit, but did not record any. C 5–104 were copied at Gabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published (Dunand) and unpublished texts were found on this section of the rim, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Gabal Says and Zalaf."

C 296 (Dunand 1388 a)

\[ l s³/dn bn wdm w s\gamma r m-\text{mdb}r \]

By S³/dn son of Wdm and he returned to permanent water from the inner desert

Provenance:
Ġabal Says, Rif Dimashq, Syria
[Latitude/Longitude: 33.311133 / 37.354389]
Ġabal Says consists of a volcanic cone within a much larger crater. The latter contains the ruins of an Umayyad palace and a semi-permanent lake. De Vogüé (1868–1877: 142–143) found only 2 Safaitic texts (C 3, 3bis) and some Kufic inscriptions by the ruins and Dunand and Macler found none. However, this is probably because none of them seems to have climbed to the top of the inner crater, where von Oppenheim (1899–1900: i, 245), reported large numbers of inscriptions on the south-east slope of the inner crater and particularly on its summit, though he did not record any. C 5–104 were copied at Ġabal Says by the Dunands, with no indication of their exact provenance. Safaitic inscriptions and at least one Greek text are to be found all around the rim of the cone and are particularly numerous on the north, north-east and south-east parts, overlooking the lake. Both published [Dunand] and unpublished texts have been found on this section of the rim by later expeditions, as well as C 296–298 which are among those (C 292–321) said in C to have come from "the region between Ġabal Says and Zalaf."

C 315 (Dunand 1396 e)

I bls¹ b[n] š[t]d

By Bls¹ son of S³d

Provenance:
"In the area between Ġabal Says and Zalaf", Rif Dimashq, Syria
This is a large area including most of the Ruḥbah and the eastern edge of the Ṣafā. Unfortunately C does not supply any further information on the provenance of this inscription and, to the best of our knowledge, the area has not been revisited. However note that C 296–298 were rediscovered on the summit of Ġabal Says.

l ʾmḥr bn ṭgd r ḍ. ‘l ʾn (g) ḍ m’

By [Mḥrb] son of ṭgd r of the lineage of ’n ḍgm

Apparatus Criticus:
MISS p. 474: mentions ṭgd r.

Last name v d

Provenance:
Ruǧm al-Marʾah, Rif Dimashq, Syria
[Latitude/Longitude: 33.101944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruǧm al-Marʾah is a high structure on top of a small hill with extensive views in all directions. To the east the ḏrah stretches for c. 10-20 km with several qāʾān (singular qāʾān) before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868-1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w Ṽg (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Marrah.

To the east the harrah stretches for c. 10-20 km with several qā’ān (singular qā’) before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868-1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w nhr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruǧm al-Marrah.

Provenance:
Ruǧm al-Mar’ah, Rif Dimashq, Syria

The co-ordinates are from http://www.geonames.org/. Ruǧm al-Mar’ah is a high structure on top of a small hill with extensive views in all directions. To the east the barrarah stretches for c. 10-20 km with several qīʿān (singular qā') before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (.5 x 2.5 m) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w ngr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w ngr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruḡm al-Mārrah.

C 380 (Wetzstein 31; Vogüé 37)

l ḥwbt bn nby

By ḡwbt son of Nby

Provenance:
Ruḡm al-Marʿah, Rif Dimashq, Syria
[Latitude/Longitude: 33.181944 / 37.273889]
The co-ordinates are from http://www.geonames.org/. Ruḡm al-Marʿah is a high structure on top of a small hill with extensive views in all directions. To the east the ḫarrāḥ stretches for c. 10-20 km with several qīʿān (singular qāʾ) before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w ngr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Rūǧm al-Marʿah, Rif Dimashq, Syria

Latitude/Longitude: 33.181°N / 37.274°E

The co-ordinates are from http://www.geonames.org/. Rūǧm al-Marʿah is a high structure on top of a small hill with extensive views in all directions. To the east the barrakah stretches for c. 10-20 km with several qāʾān (singular qāʾān) before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143) appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w nqr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Rūǧm al-Marraḥ.
Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with "wings". These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w ng ("and he kept watch") suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruḵm al-Marrāḥ.

To the east the ḥarrah stretches for c. 10-20 km with several qāʾān (singular qāʾ) before giving way to the hamād. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Γabal grave with “wings”. These may be the "two or three Bedouin tombs" seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w nrʾ (“and he kept watch”) suggesting that this was a lookout post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruʾğm al-Maʾrʾah.

C 435 (Dussaud V 23)

Iʾh (b)n gdʾ bn ʾml(y)

By ʾh son of Gdʾ son of ʾml(y)

Provenance:
Ruğm al-Marʿah, Rif Dimashq, Syria

The co-ordinates are from http://www.geonames.org/. Ruğm al-Marʿah is a high structure on top of a small hill with extensive views in all directions. To the east the ḥarrah stretches for c. 10-20 km with several qīʿān...
(singular qâ’) before giving way to the hamâd. The tower as described by Wetzstein (1860: 34) and de Vogüé (1868–1877: 143), appears to have been in ruins by the time Dussaud & Macler visited it (1901: 33, fig. 4) and has probably not altered greatly since. It is very ruined, though some courses of masonry can be seen behind the tumble of rocks in the west, east and (less clearly) the north sides. What may be the remains of the staircase mentioned by Wetzstein are visible on the west side. On the south, there is a very large grave (c. 5 x 2.5 m.) and three small tombs, plus a cave. On the east side there is another large Ahl al-Gabal grave with “wings”. These may be the “two or three Bedouin tombs” seen by Waddington (Chabot 1939: 365). Along the west and north-west sides of the main outcrop is a line of small structures, all very ruined, forming a continuous wall. To the north, east and south there are smaller outcrops. The inscriptions are mainly at the north-west corner of the tower, with a few on the rocks to the north, east and south-east, and few, if any, in the outcrops. Most of the rock is unsuitable for inscribing and much is covered by lichen, particularly on the west side. Many of the inscriptions say w nr (“and he kept watch”) suggesting that this was a look-out post (as described by Wetzstein) even in antiquity. Note that this is not the same place as Ruğm al-Mârrah.

By Ẓn son of Bs¹lmh

**Provenance:**
The debouchment of Wādī Gharz into the Ruhbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khīrbat al-Umbāshi track and its debouchment into the Ruhbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruhbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

\[m\]sw

(\textasciitilde m\textasciitilde w)

Provenance:
The debouchment of Wādī Gharz into the Ruhbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]

 Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Ruhbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Ruhbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.

{l}mšʾkʾl bn hn

By Msʾkʾl son of Hn

**Provenance:**
The debouchment of Wādī Gharz into the Rubbah, Rif Dimashq, Syria
[Latitude/Longitude: 32.9565 / 37.2773]
Apparently both banks of Wādī al-Gharz. Between the point where the wadi is crossed by the Zalaf—Khirbat al-Umbāshī track and its debouchment into the Rubbah, the inscriptions are in a series of outcrops and cairns and on the rocks of the wadi bank. The greatest concentration of texts copied in the 19th century is in the last outcrop and cairn overlooking the Rubbah (where there are approximately 80–120 texts). Note that several texts in the group C 4872–4936, which C places on the “right bank” of Wādī al-Gharz, were actually found on the left bank, and that C 4712–4723 which C places on the left bank were actually found on the right bank. There are many more inscriptions on the left bank than on the right.
